MSc/Diploma/Certificate Applied Meteorology For students entering in 2005

Awarding Institution:	The University of Reading
Teaching Institution:	The University of Reading
Faculty of Science	Programme length: 12 months
Date of specification: August 2005	
Programme Director:	Dr D.I.F. Grimes (Meteorology)
Board of Studies:	MSc Meteorology
Accreditation:	Approval is being sought from the Royal
	Meteorological Society for the programme to be
	regarded as appropriate training for meteorologists
	seeking the qualification <i>Chartered Meteorologist</i> .

Summary of programme aims

The aim of the *Applied Meteorology* MSc programme is to provide the scientific background for research and other careers across a broad spectrum of meteorology-related science focussing particularly on the links between the atmosphere and the land surface environment.

Transferable skills

The following transferable skills should be gained by students during this degree programme

- Presentation skills (written and oral)
- Design of research project
- Word-processing
- Writing technical reports
- Teamworking
- Statistical methods for analysis and interpretation of data
- Solving numerical problems related to environmental science
- Reviewing and synthesizing information in a specific field of interest
- Practical measurement skills
- Applications of standard software packages (spreadsheets, databases, image analysis) to environmental science
- Accessing academic and technical information via library and online facilities

Programme content

The taught part of the programme is designed as a series of four blocks each of four or five weeks duration with some additional modules. Blocks 1 and 2 are offered in the Autumn Term and Blocks 3 and 4 are offered in the Spring Term.

Module Code	Module Title	Block	Core/ Option	Credit	Level
Autumn Term					
MTMG01	Introduction to weather systems	1	С	10	М
MTMG02	Atmospheric physics	1	С	10	М
MTMG05	Professional skills (1) - Research Skills	1	С		М
MTMA34	Experiencing the weather	1	С	10	М
MTMA31	Vegetation & the atmosphere	2	С	10	Μ
MTMA32	Measurements & instrumentation	2	С	10	Μ
MTMA33	Introduction to computing	2	С	10	Μ
MTMG04	Weather & Climate Discussion				М
Spring Term					
MTMA49	Boundary layer processes & micrometeorology	3	С	10	М
MTMG16	Climate change	3	0	10	М
MTMA36	Hydrometeorology	3	0	10	Μ
MTMG38	Remote sensing	3	0	10	Μ
MTMG05	Professional skills (2) - Team project		C		М
MTMG19	Tropical weather systems	4	0	10	М
MTMA35	Agricultural meteorology	4	0	10	Μ
MTMA37	Data Analysis for Weather & Climate Research	4	0	10	М
CEMRC	Carbon Management	3/4	0	10	Μ
MTMG41	Applications of meteorology		С		М
MTMG04	Weather & Climate Discussion				М
Summer Term					
MTMG05	Professional skills (3) Forecasting course		С	10	М
MTMG04	Weather & Climate Discussion		С		М
MTMG99	Dissertation (MSC), Essay (Diploma)		C	60 (MSc), 30 (Diploma)	М

MSc and Diploma module listing

Notes on module listing

Where a module is taken over more than one term (e.g. MTMG04) the credit weighting is given in the final entry only.

Programme specifications

1. Specification for MSc

Students must complete all core modules (180 credits) and also choose FOUR modules in the Spring Term from those marked optional (40 credits). A dissertation worth 60 credits must be completed by the end of August.

Total credit value of MSc = 180 credits.

2. Specification for Diploma

Students must complete all core modules (80 credits), then the following two routes are available:

EITHER:

Students must choose FOUR modules in the Spring Term from those marked optional (40 credits);

OR

Students must choose ONE module in the Spring Term from those marked optional (10 credits) and complete an extended essay worth 30 credits by the end of June.

Total credit value of Diploma = 120 credits.

3. Specification for Certificate

Students must complete all assessed modules in Blocks 1 and 2 (60 credits) in the Autumn term.

Total credit value of Certificate = 60 credits.

Part-time/Modular arrangements

Students who wish to do the MSc programme part time over two years may do Blocks 1 and 3 in the first year and Blocks 2 and 4 in the 2nd year. The Team Project and Forecasting Course (MTMG05 Parts (2) and (3)) can be done in either year.

An agreement has been reached with the UK Met Office whereby the four blocks of taught modules taken on a part time basis form the major part of their graduate training programme. This is of great benefit to the MSc programme as it guarantees a significant number of postgraduate students each year who take many of the MSc modules.

Progression requirements

Progression to any block (as defined above) requires students to have attempted all assessments on the preceding blocks.

Summary of teaching and assessment

The programme is in three major sections.

1. The Autumn term (Blocks 1 and 2) provides a broad introduction to the science of meteorology. No prior knowledge of the subject is assumed, but it is expected that students are familiar with the relevant mathematics and physics. Autumn term modules are assessed partly by coursework (including laboratory reports) and partly by examinations taken at the end of the Christmas vacation.

2. More advanced and specialised modules are presented in the Spring Term (Blocks 3 and 4). The "Boundary Layer Processes and Micrometeorology" module MTMA49 is compulsory. The modules are assessed partly by coursework and partly by examination at the end of the Easter Vacation.

An additional component in the Spring Term is the "Team Project" (MTMG05 (2)) undertaken by students working together in small groups. A single week during the term is devoted to researching and presenting this project. Assessment is based on a written report and an oral presentation.

3 The final part of MTMG05 (Forecasting Course) takes place at the beginning of the Summer Term.

From this point on, almost all student time is spent (for MSc students) in preparing a dissertation on a selected topic which must be completed by the 31st August or (for some Diploma students) in preparing an extended essay on a selected topic which must be completed by the end of June.

In both cases, the student chooses the topic in consultation with members of staff.

The MSc dissertation must contain a substantial review of current and recent research in the chosen field and will usually also contain some original research in the form of experimental work and/or data analysis. Students will be asked to give a brief oral presentation on their progress around the end of the summer term.

The Diploma essay will normally be a literature review.

Throughout the year, students are encouraged to attend departmental seminars and are expected to attend the Weather & Climate Discussion (MTMG04) held weekly in term time. The "Applications of Meteorology" module (MTMG41) is a series of seminars and visits to relevant institutions. While these activities are not examined, they are an important component of the student's education. They contribute to their general understanding and to possible choices of dissertation topic and career.

Much of the teaching on the Applied Meteorology programme is in common with the MSc programmes in Weather, Climate and Modelling and Mathematical and Numerical Modelling of the Ocean and Atmosphere. First year PhD students and Met Office staff undergoing training also attend many of the modules, thus class sizes may be as high as 50 in the Autumn Term when all modules are core. In the Spring term when students choose from a range of options, class size is typically 10 to 20.

Programme classification

The University's taught postgraduate marks classification is as follows:

Mark	Interpretation
70-100%	Distinction
60 - 69%	Merit
50 - 59%	Good standard (Pass)
40 - 49%	Work below threshold standard (Fail)
0-39%	Unsatisfactory Work (Fail)

For Masters Degree

To pass the MSc students must gain an average mark of 50 or more overall including a mark of 50 or more for the dissertation. In addition the total credit value of all modules marked below 40 must not exceed 30 credits and for all modules marked below 50 must not exceed 50 credits.*

Students who gain an average mark of 70 or more overall including a mark of 60 or more for the dissertation and have no mark below 40 will be eligible for the award of a Distinction. Those gaining an average mark of 60 or more overall including a mark of 50 or more for the dissertation and have no mark below 40 will be eligible for the award of a Merit.

For PG Diploma

To pass the Postgraduate Diploma students must gain an average mark of 50 or more. In addition the total credit value of all modules marked below 40 must not exceed 30 credits and for all modules marked below 50 must not exceed 50 credits.*

Students who gain an average mark of 70 or more and have no mark below 40 will be eligible for the award of a Distinction. Those gaining an average mark of 60 or more and have no mark below 40 will be eligible for the award of a Merit.

For PG Certificate

To pass the Postgraduate Certificate students must gain an average mark of 50 or more. In addition the total credit value of all modules marked below 40 must not exceed 10 credits.*

*The provision to permit a candidate to be passed overall with a profile containing marks below 40 is made subject to the condition that there is evidence that the candidate applied him or herself to the work of those modules with reasonable diligence and has not been absent from the examination without reasonable cause.

Oral examination of some or all the candidates will be held at the Examiners' Meeting in September. During the oral examination, candidates are expected to show an understanding both of the background to their dissertation, and of the general course work.

Admission requirements

Entrants to this programme are normally required to have obtained a good honours degree in a physical, environmental or engineering science. 'A' level physics or mathematics is usually required. Students with other qualifications may be admitted subject to a satisfactory performance in a preparatory course in the preceding year or completion of a self-teaching package in maths and physics. Prior knowledge of meteorology is not essential.

Admissions Tutor:

Dr M. H. P. Ambaum.

Support for students and their learning

University support for students and their learning falls into two categories. Learning support includes IT Services, which has several hundred computers and the University Library, which across its three sites holds over a million volumes, subscribes to around 4,000 current periodicals, has a range of electronic sources of information and houses the Student Access to Independent Learning (S@IL) computer-based teaching and learning facilities. There are language laboratory facilities both for those students studying on a language degree and for those taking modules offered by the Institution-wide Language Programme. Student guidance and welfare support is provided by Programme Directors, the Careers Advisory Service, the University's Special Needs Advisor, Study Advisors, Hall Wardens and the Students' Union.

The Department of Meteorology provides modern laboratory facilities and a field site for teaching purposes. In addition to the central University facilities, the Department has its own PC labs for teaching and student use and a professionally staffed library with copies of all recommended texts and runs of major meteorological periodicals. The Meteorology Department. library houses a learning resource centre with copies of past exam papers, course notes etc.. Adjacent to the library is a purpose-designed student study area.

Learning support is provided by a tutor system and optional class tutorials given with some modules. Each student is assigned a tutor at the start of the programme. Tutorial groups normally consist of three or four students. Weekly tutorials are compulsory during the Autumn term and thereafter may be continued if desired by mutual agreement between tutor and tutees. For team projects and dissertation, guidance is given by a project supervisor.

A self teaching package is available for those students who need remedial support with Maths and Physics. This package is also provided as a pre-course 'warm-up' for those students who need to improve their Maths and Physics skills before the start of the programme in October.

Career prospects

The Applied Meteorology MSc has an excellent record in placing graduates in relevant employment. Of the 29 students graduating in the years 1999 and 2000, 27 are working in meteorology or related disciplines. This figure includes 8 graduates employed in the Met Office and 3 working on PhD projects.

Opportunities for study abroad or for placements

Dissertation projects have been successfully arranged with in collaboration with a number of institutions including the Met Office, The Centre for Ecology and Hydrology in Wallingford, The Environment Agency, Fugro Geos Weather Consultancy and Westlakes Research Institute in Cumbria.

Educational aims of the programme

The aim of the *Applied Meteorology* MSc programme is to provide the scientific background for research and other careers across a broad spectrum of meteorology-related science focussing particularly on the links between the atmosphere and the land surface environment.

Students graduating from this programme should have the knowledge and the technical and computing skills to equip them to carry out quantitative scientific research and technical projects not only within meteorology but also within related areas of environmental science.

Please note: This specification provides a concise summary of the main features of the programme and the learning outcomes that a typical student might reasonably expect to achieve and demonstrate if he/she takes full advantage of the learning opportunities that are provided. More detailed information on the learning outcomes, content and teaching, learning and assessment methods of each module can be found in module and programme handbooks.

A.	Knowledge and understanding of:		Teaching/learning methods and
1.	the physical processes which drive the		strategies
	atmospheric system giving rise to		Knowledge and understanding for items 1
	weather and climate;		to 5 is achieved through lectures, seminars,
2.	the feedback between the Earth's		discussions and tutorials and computer
	surface and the atmosphere and the		laboratories. Lectures often include
	impact of these feedback processes on		problem sheets and guided reading as
	weather, climate and land surface		additional material
	characteristics;		In addition, knowledge and understanding
3.	methods of measurement and data	►	of measurement techniques (3) is gained
	analysis appropriate to monitoring		through laboratory classes and a field
	atmospheric processes and an		course.
	appreciation of the limitations and		In addition to taught modules, item 5 is
	uncertainties of the measurements and		achieved by independent reading and
	data		library searching for the dissertation and
4.	impacts of weather, climate and		team project.
	climate change on society and ecology		Assessment
5.	advanced, specialist weather and		Knowledge is tested through written
	climate topics.		assignments, project reports and

Programme Outcomes

В.	Intellectual skills - the ability to:	Teaching/learning methods and
1.	apply knowledge and understanding	strategies
	gained to a variety of familiar and	1, 2 3and 4 are developed by a
	unfamiliar situations;	combination of problem sheets, worked
2.	5	examples, coursework assignments,
	of possible weaknesses and	computing classes project work and
	uncertainties	dissertation
3.	formulate and test hypotheses	5 is addressed through lectures, tutorials
4.	show independence and initiative in	and also through team project and
	approaches to problem solving	dissertation reports and presentations.
5.	present conclusions clearly to expert	6 is covered in lectures and through the
	and non-expert audiences in written	team project and dissertation.
	and oral forms	
6.	critically review, synthesise and	Assessment
	evaluate published research.	1 and 2 are assessed through coursework
	-	and exams
		3, 4 and 5 are mainly assessed through
		team project and dissertation presentations
		and reports

Skills and other attributes

G		
	Practical skills	Teaching/learning methods and
1.	Planning, conducting, and reporting on investigations, including the use of secondary data	strategies Laboratory, IT, field work and field classes are designed to enhance skills 1 and 2. 3 is
2.	Collecting, recording and analysing	emphasised through guidelines and advice
2.	data using appropriate techniques in	given to students in connection with
	the field and laboratory	practical work and the field course.
3.	Undertake field and laboratory	4. is emphasised through guidelines issued
	investigations in a responsible and safe	to students in connection with project and
	manner	dissertation work.
4.	Referencing work in an appropriate	
	manner	Assessment
		1 and 2 are tested formatively in
		coursework connected with laboratory and
		field classes. 3 is not assessed. 4 is
		assessed in team project and dissertation
P	T	
	Transferable skills	Teaching/learning methods and
