BSc Mathematics For students entering Part 1 in 2005

UCAS code: G100

Awarding Institution: Teaching Institution: Relevant QAA subject benchmarking group(s):

Faculty of Science Date of specification: 25-Apr-05 Programme Director: Dr P. A. Mulheran Programme Adviser: Dr J. A. Leach Board of Studies: Mathematics, Meteorology and Physics The University of Reading The University of Reading Mathematics, Statistics and Operational Research Programme length: 3 years

Accreditation: Approved by the Institute of Mathematics and its Applications as an appropriate academic training for mathematicians seeking the qualification *Chartered Mathematician*.

Summary of programme aims

The BSc programme in Mathematics aims to provide a good general mathematical education for those not intending to continue as professional mathematicians. This is achieved by providing core material in the first two years and then in the third year a blend of courses, some giving an overview of a broad area of mathematics and others studying a particular topic in depth, along with a range of appropriate subject-specific and transferable skills. (For a full statement of the programme aims and learning outcomes see below.)

Transferable skills

The University's Strategy for Teaching and Learning has identified a number of generic transferable skills which all students are expected to have developed by the end of their degree programme. In following this programme, students will have had the opportunity to enhance their skills relating to career management, communication (both written and oral), information handling, numeracy, problem-solving, team working and use of information technology.

By the end of the programme students are expected to have gained experience and show competence in the following transferable skills: IT (word-processing, using standard and mathematics software), scientific writing, oral presentation, team-working, problem-solving, use of library resources, time-management, and career management and planning.

Programme content

The profile which follows states which modules must be taken (the compulsory part), together with one or more lists of modules from which the student must make a selection (the "selected" modules). Students must choose such additional modules as they wish, in consultation with their programme adviser, to make 120 credits in each Part. The number of modules credit for and the level of each module are shown after its title.

Part 1 (three terms)		Credits	Level
Compulsory modules			
MA11A	Introduction to Analysis	20	С
MA11B	Calculus and Applications	20	С
MA11C	Matrices, Vectors and Applications	20	С

MA11D	Introduction to Algebra	20	С
-------	-------------------------	----	---

and other modules with a total credit of 40. No further Mathematics modules may be taken in Part 1.

Students who have taken MA11A, MA11B, MA11C, AS1A and AS1B or who have taken MA11A, MA11B, MA11C, together with 60 credits of Economics, Meteorology, Physics or Psychology may follow this programme. Such students must take MA24G in Part 2 in place of MA24K and then take MA34K in Part 3 (as part fulfilment of requirement (ii)).

Part 2 (three to <i>Compulsory mo</i>	Credits	Level	
MA24A	Analysis	20	I
	-		I T
MA24B	Differential Equations	20	1
MA24J	Vector Calculus and Numerical Analysis	20	I
MA24K	Algebra and Dynamics	20	Ι
MA24E	Linear Algebra and Coding Theory	20	Ι
MA24F	Communicating Mathematics	20	Ι
Part 3 (three terms)		Credits	Level
Compulsory modules			
MA37A	Complex Analysis and Calculus of Variations	20	Н
MA37B	Topics in Applied Mathematics	20	Н
MA37C	Topics in Pure Mathematics	20	Н
	1		

Optional modules:

(i) At least 40 additional credits of Level H or M Mathematics must be taken in Part 3.

(ii) Additional modules to make a total of 120 credits in Part 3.

Progression requirements

To gain a threshold performance at Part 1 and qualify for the CertHE a student shall normally be required to achieve an overall average of 40% over 120 credits taken in Part 1,where all the credits are at C level or above, and a mark of at least 30% in individual modules amounting to not less than 100 credits. In order to progress from Part 1 to Part 2, a student shall normally be required to achieve a threshold performance at Part 1 and obtain an average of least 40% in the Part 1 Mathematics modules MA11A, MA11B, MA11C, MA11D, taken together, with at least 30% in each of those modules.

To gain a threshold performance at Part 2 and qualify for the DipHE a student shall normally be required to achieve an overall average of 40% over 120 credits taken in Part 2, and a mark of at least 30% in individual modules amounting to not less than 100 credits. In order to progress from Part 2 to Part 3, a student shall normally be required to achieve a threshold performance at Part 2.

Summary of teaching and assessment

Teaching is organised in modules that typically involve both lectures and problems. The assessment is carried out within the University's degree classification scheme, details of which are in the programme handbooks. The pass mark in each module is 40%. Modules in

Part 1 and 2 are assessed by a mixture of coursework and formal examination. There are some modules which are assessed wholly by coursework and others wholly by examination; the details are given in the module descriptions.

Part 2 contributes one third of the final assessment and Part 3 the remaining two thirds.

Admission requirements

Entrants to this programme are normally required to have obtained:

Grade C or better in English in GCSE; and achieved

UCAS Tariff: A Level: 300 points including grade B in A Level Mathematics; or

International Baccalaureat: 30 points including 6 in Higher Mathematics; or

Advanced GNVQ: Merit in one of the following subject areas: Engineering, Information Technology or Science, accompanied by A Level Mathematics Grade B or

Scottish Highers: Grade A in Mathematics and two Bs and a C in three other subjects.

Irish Leaving Certificate: Grade A in Mathematics and three Bs and a C in four other subjects

Two AS grades are accepted in place of one A-Level except in Mathematics.

Admissions Tutor: Dr Graham Williams

Support for students and their learning

University support for students and their learning falls into two categories. Learning support includes IT Services, which has several hundred computers and the University Library, which across its three sites holds over a million volumes, subscribes to around 4,000 current periodicals, has a range of electronic sources of information and houses the Student Access to Independent Learning (S@IL) computer-based teaching and learning facilities. There are language laboratory facilities both for those students studying on a language degree and for those taking modules offered by the Institution-wide Language Programme. Student guidance and welfare support is provided by Personal Tutors, the Careers Advisory Service, the University's Special Needs Advisor, Study Advisors, Hall Wardens and the Students' Union.

Within the Mathematics Department additional support is given though practical classes in Part 1. The development of problem-solving skills is assisted by extensive provision of model solutions to problems. There is a Course Adviser to offer advice on the choice of modules within the programme.

Career prospects

Mathematics graduates typically find employment in areas such as finance, accountancy, actuarial work, management services and teaching, as well as further study and research and some less common choices. In recent years students who have followed this programme have gone into jobs as actuarial trainee, trainee chartered accountant, IT management trainee, teaching, business analyst and postgraduate study.

Opportunities for study abroad or for placements

Although there are no formal arrangements for the BSc Mathematics programme, informal arrangements may be possible.

Educational aims of the programme

The BSc programme in Mathematics aims to provide a good general mathematical education for those not intending to continue as professional mathematicians. This is achieved by providing core material in the first two years and then in the third year a blend of courses, some giving an overview of a broad area of mathematics and others studying a particular topic in depth, along with a range of appropriate subject-specific and transferable skills.

Programme Outcomes

The programme provides opportunities for students to develop and demonstrate knowledge and understanding, skills, qualities and other attributes in the following areas:

	5		
A.	Knowledge and understanding of:		Teaching/learning methods and strategies
1.	the fundamental concepts and techniques		The knowledge required for the basic topics
	of calculus, analysis, algebra, dynamics		is delineated in formal lectures supported by
	and numerical mathematics —	\rightarrow	problem sets for students to tackle on their
2.	the use of the basic techniques of		own. In Part 1 these are supported by
	mathematics in applicable areas of		tutorials and practical classes through which
	mathematics, such as differential		students can obtain feedback on their non-
	equations, fluid mechanics, coding		assessed work.
	theory and numerical analysis		In the later parts of the course students are
3.	a selection of more specialist optional		expected to work at additional problems on
	topics		their own and seek help when required, using
4.	some of the breadth of topics which can		the office hours of staff. Model solutions are
	be tackled by mathematics.		provided for problems set.
	2		4. is provided by the modules Topics in
			Applied Mathematics and Topics in Pure
			Mathematics.
			Assessment
			Most knowledge is tested through a
			combination of coursework and unseen
			formal examinations. Dissertations and oral
			presentations also contribute in other parts of
			the programme.
			the programme.

Knowledge and Understanding

 B. Intellectual skills – able to: 1. think logically 2. analyse and solve problems 3. organise tasks into a structured form 4. transfer appropriate knowledge and methods from one topic within the subject to another 5. conduct independent study of a chosen topic and report on the results. 	Teaching/learning methods and strategies Logic is an essential part of the understanding and construction of mathematical proofs and is embedded throughout the programme. The quality of a solution to a problem is substantially determined by the structure of that response; analysis, synthesis, problem solving, integration of theory and application, and knowledge transfer from one topic to another
	are intrinsic to high-level performance in the programme. <i>Assessment</i> 1- 3 are assessed indirectly in most parts of Mathematics, while 4 contributes to the more successful work. 5 is assessed in the report produced as part of the modules <i>Topics in</i> <i>Applied Mathematics</i> and <i>Topics in Pure</i> <i>Mathematics</i> .
 C. Practical skills – able to: 1. understand and construct mathematical proofs 2. formulate and solve mathematical problems 3. analyse numerical methods and respond to the issues of accuracy, stability and convergence 4. write and present orally a report on a chosen topic. 	Teaching/learning methods and strategies Mathematical proof is taught in Part 1 lectures and reinforced in practical classes. Problem solving is introduced in lectures in Part 1 and forms a large part of subsequent Mathematics. Numerical analysis courses introduce and develop the ideas of accuracy, stability and convergence, illustrated by practical tasks.
	Assessment 1 and 2 are tested both formatively in coursework and summatively in examinations. 3 is assessed practically through coursework and the principles through formal examination. 4 is assessed through the project dissertation and its oral presentation.

 2. communicate scientific ideas 3. give oral presentations 4. work as part of a team 5. use library resources 6. manage time 7. plan their career. package Mathematica taught in Part 1 mathematics. Team work and career planning are part of one Part 2 module. Communication skills are the focus of one module in Part 2, and these are deployed in the final year project. Time management is

Please note - This specification provides a concise summary of the main features of the programme and the learning outcomes that a typical student might reasonably be expected to achieve and demonstrate if he/she takes full advantage of the learning opportunities that are provided. More detailed information on the learning outcomes, content and teaching, learning and assessment methods of each module can be found in the module description and in the programme handbook. The University reserves the right to modify this specification in unforeseen circumstances, or where the process of academic development and feedback from students, quality assurance processes or external sources, such as professional bodies, requires a change to be made. In such circumstances, a revised specification will be issued.
