# **BSc Artificial Intelligence and Cybernetics** For students entering Part 1 in 2006

Awarding Institution:The University of ReadingTeaching Institution:The University of ReadingRelevant QAA subject benchmarking group(s):ComputingFaculty of ScienceProgramme length: 3 yearsDate of specification: 24/01/08Programme Director: Dr. V.F.RuizProgramme Adviser: Dr R.J.Mitchell (Cybernetics), Dr G.T.McKee (Computer Science)Board of Studies: Computer Science and CyberneticsAccreditation: British Computer Society

## Summary of programme aims and learning outcomes

The programme aims to give an understanding of intelligence and intelligent systems, whether these are biological or artificial; to appreciate the use of intelligence for machine learning; and to be well informed but critical about current developments. (For a full statement of the programme aims and learning outcomes see below)

### Transferable skills

The University's strategy for teaching and learning has identified a number of generic transferable skills which all students are expected to have developed by the end of their degree programme. In following this programme students will have had the opportunity to enhance their skills relating to career management, communication (both written and oral), information handling, numeracy, problem-solving, team working and use of information technology.

As part of this programme students are expected to have gained experience and show competence in the following transferable skills: IT (word-processing, using standard and mathematical software, scientific programming), scientific writing, oral presentation, team-working, problemsolving, use of library resources, time-management, career planning and management, and business awareness.

### **Programme content**

The profile which follows states which modules must be taken (the compulsory part), together with one or more lists of modules from which the student must make a selection (the "selected" modules). Students must choose such additional modules as they wish, in consultation with their programme adviser, to make 120 credits in each Part. The number of modules credit for each module is shown after its title.

Par	rt 1 (three ter	Credits	Level			
Cor						
	SE1CA5	Cybernetics and Its Application		С		
	SE1SA5	Programming	20	С		
	SE1SB5	Software Engineering	20	С		
	SE1EB5	Computer and Internet Technologies		С		
and	SE1CB5	<i>Engineering Mathematics</i> [if have A level Maths]	20	С		
or	MA116	<i>Mathematics for Computer Scientists</i> [otherwise]	20	С		
Optional modules – choose modules worth a further 20 credits so total is 120						
-	SE1EA5	Electronic Circuits	20	С		
	SE1SC5	Computer Science Roadmap	20	С		

Part 2 (three terms)			Credits	Level		
Compulsory modules						
	CS2TD7	Databases	10	Ι		
	CY2B7	Electronics for Intelligent Systems [If taken SEISC5]	10	Ι		
or	CS2T7	Introduction to Algorithms [If not taken SE1SC5]	10	Ι		
	CS2L7	Human Computer Interaction	10	Ι		
	CS2Q7	Artificial Intelligence	10	Ι		
	CY2D7	Neurocomputation	20	Ι		
	CY2F7	Medical Engineering and Experimentation	10	Ι		
	CY2G2	Signals	10	Ι		
	CY2H6	Further Computer Systems	10	Ι		
	EE2C2	Digital Circuit Design	10	Ι		
	SE2P6	Engineering Applications	20	Ι		
Part 3 (three terms)			Credits	Level		
Co	mpulsory mod	dules				
	CS3Q2	Computer Science Project	30	Н		
or	CY3P2	Cybernetics Project	30	Н		
	CS3A2	Computer Networking	10	Н		
	CY3B2	Machine Intelligence	10	Н		
	CY3G2	Modern Heuristics	10	Н		
		Social, Legal and Ethical Aspects of Science and				
	SE3Z5	Engineering	20	Н		
Ор	tional module	es must be chosen to give a total of 120 credits:				
	CS3K7	Data Mining	10	Н		
	CS3M6	Evolutionary Computation	10	Н		
	CS3U7	Image Analysis	10	Н		
	CS3V7	Visual Intelligence	10	Н		
	CS3Y7	Robot Systems	10	Н		
	CS3W7	Multi-Agent Systems	10	Н		
	CY3E2	Biological Cybernetics	10	Н		
	CY3F8	Virtual Reality	10	Н		
	CY3J8	Machines in Motion	10	Н		
	CY3K7	Bionics	10	Н		
	CY4I7	Biomechanics	10	Μ		
	LAXXX	Institution Wide Language Programme	20	Н		

### **Progression requirements**

To gain a threshold performance at Part 1 and qualify for the CertHE a student shall normally be required to achieve an overall average of 40% over 120 credits taken in Part 1, where all the credits are at C level or above, and a mark of at least 30% in individual modules amounting to not less than 100 credits. In order to progress from Part 1 to Part 2, a student shall normally be required to achieve a threshold performance at Part 1, and to have no module mark below 30%.

To gain a threshold performance at Part 2 and qualify for the DipHE a student shall normally be required to achieve an overall average of 40% over 120 credits taken in Part 2, and a mark of at least 30% in individual modules amounting to not less than 100 credits. In order to progress from Part 2 to Part 3, a student shall normally be required to achieve a threshold performance at Part 2. A student whose average is 60% or over may be qualified for the MEng AI/Cyb degree.

### Summary of teaching and assessment

Teaching is organised in modules that typically involve lectures and tutorial or laboratory practicals. Most modules are assessed by a mixture of coursework and formal examination. Some modules, for example the Part 3 project, are assessed only as coursework. Details are given in the relevant module description.

A student must obtain at least 40% in their project (CY3P2/CS3Q2) to be eligible for honours.

Part 2 and Part 3 contribute to the final degree assessment in the ratio 1:2

### **Admission requirements**

Entrants to the programme are normally required to have obtained:

A minimum of GCSE: Mathematics Grade B or higher and Combined Science Grade B or higher. UCAS Tariff: 260 points with a Grade C or higher in Mathematics or science subject.

International Baccalaureate: 30 points.

Equivalent qualifications are acceptable.

Admissions Tutor: Dr Will Browne

### Support for students and their learning

University support for students and their learning falls into two categories. Learning support includes IT Services, which has several hundred computers, and the University Library, which across its three sites holds over a million volumes, subscribes to around 4,000 current periodicals, has a range of electronic sources of information and houses the Student Access to Independent Learning (S@IL) computer-based teaching and learning facilities. There are language laboratory facilities both for those students studying on a language degree and for those taking modules offered by the Institution-wide Language Programme. Student guidance and welfare support are provided by Personal Tutors, the Careers Advisory Service, the University's Special Needs Advisor, Study Advisors, Hall Wardens and the Students' Union.

Within the providing School additional support is given though practical laboratory classes. The development of problem-solving skills is assisted by appropriate assignment and project work. There is a Programme Adviser to offer advice on the choice of modules within the programme. Course handbooks are provided for each Part of the course: these give more details about the modules which make up the degree. In addition, the School produces a Handbook for Students, which provides general information about the staff and facilities within the school.

#### **Career prospects**

Career prospects are good as the course is very relevant to today's high technology society and, because the course is not dependent upon any one industry, graduates are employed in a variety of areas. Some graduates join large companies, often IT based companies; others join smaller companies and consultancies; and some choose to further their research interests either in the School or at other Universities.

## Opportunities for study abroad or for placements

N/A

### Educational aims of the programme

The programme aims to combine an understanding of systems in general, both technological and biological, with a knowledge of relevant modern technologies, theories and techniques; to produce good practically oriented graduates whose systems grounding allows them to work in an academic, research or industrial environment, as individuals or as part of a team. This programme is distinctive in that it gives an overview of the computational and the human aspects of intelligence.

## **Programme Outcomes**

The programme provides opportunities for students to develop and demonstrate knowledge and understanding, skills, qualities and other attributes in the following areas:

<ul><li>A. Knowledge and understanding of:</li><li>1. Appropriate mathematical</li></ul>	Teaching/learning methods and strategies
	strategies
<ul> <li>techniques.</li> <li>2. Information technology.</li> <li>3. Design of systems.</li> <li>4. Aspects of computer and human intelligence.</li> <li>5. Business context.</li> <li>6. Engineering practice.</li> </ul>	The knowledge required for the basic topics is obtained via lectures, tutorials, laboratory practicals, assignments and project work. Appropriate IT packages are taught. Laboratory demonstrators and project supervisors advise students, and feedback is provided on all continually assessed work. As the course progresses students are expected to show greater initiative. <i>Assessment</i> Most knowledge is tested through a combination of practicals, assignments and formal examinations. Students write reports on many assignments after Part I, and may also make oral presentations of their work.
	1

Knowledge and Understanding

Skills and other attributes

<ul> <li>B. Intellectual skills – able to: <ol> <li>Select and apply appropriate scientific principles, mathematics and computer based methods for analysing systems.</li> <li>Organise tasks into a structured form.</li> <li>Understand the evolving state of knowledge in a rapidly developing area.</li> <li>Transfer appropriate knowledge and methods from one topic within the subject to another.</li> <li>Plan, conduct and write a report on a project or assignment.</li> <li>Prepare and give an oral presentation.</li> <li>Evaluate commercial risks.</li> </ol> </li> </ul>	Teaching/learning methods and strategiesAppropriate mathematical, scientific and IT skills and tools are taught in lectures and problems to be solved are given as projects or assignments. Written and oral presentations are required for various assignments and projects.Assessment 1-4 (see left box) are assessed partly by examination and partly by project or assignment work. 5 and 6 are assessed as part of project work. 7 is assessed by examination.
--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

<ul> <li>C. Practical skills – able to: <ol> <li>use appropriate mathematical methods or IT tools;</li> <li>program a computer to solve problems;</li> <li>use relevant laboratory equipment; and analyse the results critically;</li> <li>manage a project;</li> <li>present work.</li> </ol> </li> </ul>	Teaching/learning methods and strategiesMathematics and IT tools are introduced in lectures and their use is assessed by examinations and assignments. Programming assignments are set and students may write programs as part of other projects. Laboratory practicals and projects are used for 3 and projects are used for 4 and 5.Assessment 1 is tested in coursework and in examinations.2 and 5 are tested by assignments and projects. 3 is assessed by practicals and sometimes in projects. 4 is assessed through project work.
<ul> <li>D. Transferable skills – able to: <ol> <li>use IT tools</li> <li>acquire, manipulate and process data;</li> <li>use creativity and innovation;</li> <li>solve problems;</li> <li>communicate scientific ideas;</li> <li>give oral presentations;</li> <li>work as part of a team;</li> <li>use information resources;</li> <li>manage time.</li> </ol> </li> </ul>	Teaching/learning methods and strategiesIT methods are taught partly in lectures, but mainly through laboratory sessions and assignments.Data skills are acquired in the laboratory and through project work. Creativity, innovation, problem solving, team working, time management and presentations are learnt in projects. Use of information resources such as the library and IT is learnt through projects and assignments.AssessmentSome skills such as the ability to use IT tools and the ability to communicate orally and in written form are directly assessed in assignments or projects. Other skills such as time management are not directly assessed but their effective use will enhance a student's overall performance.

Please note - This specification provides a concise summary of the main features of the programme and the learning outcomes that a typical student might reasonably be expected to achieve and demonstrate if he/she takes full advantage of the learning opportunities that are provided. More detailed information on the learning outcomes, content and teaching, learning and assessment methods of each module can be found in the module description and in the programme handbook. The University reserves the right to modify this specification in unforeseen circumstances, or where the process of academic development and feedback from students, quality assurance processes or external sources, such as professional bodies, requires a change to be made. In such circumstances, a revised specification will be issued.
