BSc Environmental Biology For students entering Part 1 in 2006

Awarding Institution:

Teaching Institution:

University of Reading
University of Reading

UCAS code: C150

Programme length: 3 years

Relevant QAA subject benchmarking group(s): Biosciences

Faculty of Life Sciences

Programme Director: Dr P E Hatcher
Programme Adviser: Dr J D Ross
Date of specification: July 2006

Board of Studies: BioEnvironmental Sciences

Accreditation: None

Summary of programme aims

This degree is concerned especially with all aspects of living organisms and their environment, their interaction with one another and reaction to the abiotic environment. Although the major emphasis is on natural population and habits, consideration is also given to ecosystems that have been perturbed or polluted. The subject matter of Parts 1 and 2 is broadly based, while Part 3 provides a coherent in-depth area of study of the student's choice. Students are expected to gain a broad understanding of the concepts underpinning biology and the environmental factors which interact with organisms. They will receive training, and be expected to demonstrate competence, in laboratory techniques in biology, the use of computers to access information resources and the use of statistical programmes for data analyses. Students will be expected to acquire individual and group communications skills in written work and in oral and poster presentations. The development of critical reading skills will be strongly encouraged. The Part 3 research project will allow students to apply the learned skills in an independent piece of work. (For a full statement of the programme aims and learning outcomes see below).

Transferable skills

The University's Strategy for Teaching and Learning has identified a number of generic transferable skills which all students are expected to have developed by the end of their degree programme. In following this programme, students will have had the opportunity to enhance their skills relating to career management, communication (both written and oral), information and data handling, numeracy, problem solving, team working and use of information technology.

As part of this programme all students are also expected to have gained experience and show competence in the following transferable skills:

- 1. The ability to assess, evaluate and present scientific data.
- 2. The ability to design and undertake a programme of scientific investigation and to effectively communicate the aims and results of this investigation.
- 3. A range of field and laboratory-based practical skills

Programme content

The profile which follows states which modules must be taken (the compulsory part), together with one or more lists of modules from which the student must make a selection (the 'selected' modules). Students must choose such additional modules as they wish, in consultation with their programme adviser, to make 120 credits in each Part. The number of module credits for each module is shown after its title.

Students must attend a minimum of two field courses during the programme.

Part 1 (three terms) Compulsory modules:		Level	
BI1C10	Cell biology & biochemistry	10	C
BI1C11	Genetics and molecular biology	10	C
BI1M10	Biodiversity	10	C
BI1Z10	Ecology	10	C
BI1Z11	Community ecology	10	C
CH1FC1	Fundamental concepts in chemistry 1*	10	C

^{*1} Compulsory for students without a post-16 qualification in chemistry.

Optional modules:

Students will choose additional modules up to a total of 120 credits which from the following list:

Term 1:

		Credits	Level
AM1M11	Fundamental microbiology *2	10	C
AP1EF1	The UK food chain	10	C
GO1D1	Earth structure & materials	20	C
PS1BA1	Plant world	10	C
PS1HS1	Soil use and management	10	C
SS1A1	Introduction to soil science	20	C
Term 2:			
AM1M12	Important microbes *2	10	C
AM1Z10	The whole mammal	10	C
B11S12	Biological Sciences Field trip (Easter Vacation)	10	C
G01D2	Earth history	10	C
PS1AB2	Physical ecology	10	C
PS1BA2	Plant physiology & development	10	C
PS1BC2	Introductory botany	10	C
SS1A2	Soils, land and environment	10	C

^{*2} Students wishing to take Important Microbes (Term 2) must first have taken Fundamental Microbiology in Term 1

Part 2 (thre	e terms)		
Compulsory	modules:		
AM2Z3	4 Invertebrate zoology	10	I
AM2Z3	7 Aquatic Biology	10	I
AS2A1	Statistics for Life Sciences	10	I
PS2BC5	Ecological Aspects of Environmental Assessment	10	I
Either:			
AM2Z3	8 Field Course	10	I
Or:			
PS2BF3	Botany Field Course	10	I
Unless atten	ded BI1S12 – Biological Sciences field trip		
Either:			
AM2S3	1 Concepts & Skills (Group Projects & Data Handling)	10	I
Or:			
PS2AC	4 Career Management & Transferable Skills	10	I

Optional modules:

Students will choose additional modules up to a total of 120 credits from the following list. Suitable modules from other schools may also be chosen subject to the agreement of the Programme Adviser.

			Credits	Level
	AM2Z32	Vertebrate Zoology	10	I
	AM2Z33	Animal behaviour	10	I
	AM2Z37	Aquatic Biology	10	I
	BI2B31	Macro-Evolution	10	I
	BI2Z31	Micro-evolution	10	I
	LA1XX1	Institution Wide Language Programme	20	I
	PS2AA5	Plant Genetics	10	I
	PS2AB4	Weed Biology & Control	10	I
	PS2AB5	Crop Pests & Integrated Crop Protection	10	I
	PS2BD4	Plants and The Environment	10	I
	PS2BE5	Ecological Biochemistry	10	I
	PS2BG3	The Flora of the British Isles	10	I
	Part 3 (three terms Compulsory modules:			
Col	AM3S75	Biology Project	40	Н
Eith Or:	her: PS3BF8	Botany Field Course	10	I
	: AM3Z80	Marine Biology Field Course	10	I

Optional modules:

Students will choose additional modules up to a total of 120 credits from an approved list.

AM3Z72	Insects and man	10	Н
AM3Z74	Conservation biology	10	Н
AM3Z76	Behavioural ecology and population biology	10	Н
AM3Z77	Research topics in ecology and evolution	10	Н
AM3Z79	Animal Diversity	10	Н
PS3BC7	Conservation and biodiversity	10	Н
PS3BD7	Physiological ecology	10	Н

Progression requirements

Progression from Part 1 to Part 2

To gain a threshold performance at Part 1 a student shall normally be required to achieve an overall average of 40% over 120 credits taken in Part 1, and a mark of at least 30% in individual modules amounting to not less than 100 credits. In order to progress from Part 1 to Part 2, a student shall normally be required to achieve a threshold performance at Part 1.

Progression from Part 2 to Part 3

To gain a threshold performance at Part 2 a student shall normally be required to achieve an overall average of 40% over 120 credits taken in Part 2, and a mark of at least 30% in individual modules amounting to not less than 100 credits. In order to progress from Part 2 to Part 3, a student shall normally be required to achieve a threshold performance at Part 2.

Summary of teaching and assessment

Teaching is organised in modules. Teaching in Part 1 consists of lectures and practical classes. Modules can be assessed by 100% coursework but more usually are assessed by a combination of coursework (20%) and formal examination (80%).

In Parts 2 and 3, lectures and practical classes continue to be important modes of teaching but they are increasingly supplemented by seminars, group work and field studies, including two Field Courses. Modules can be 100% in-course assessed but are more usually assessed by a combination of coursework (30%) and formal examination (70%).

Part 2 contributes one third of the overall assessment and Part 3 the remaining two thirds. In order to be eligible for Honours, students must gain an overall weighted average of 40% and must gain at least 40% in the Biology Project module.

Admission requirements

Entrants to this programme are normally required to have obtained:

UCAS Tariff: 300 points from no more than 4 AL or AS subjects including C in at least two AL science subjects, plus Mathematics, Double Science and English at Grade B at GCSE level.

International Baccalaureat: 32 points

Scottish Highers BBBB(Biology B)

Irish Leaving Certificate: BBBBC (Biology B)

GNVQ is accepted and mature students are also encouraged to apply

Admissions Tutor: Dr J Hawkins

Support for students and their learning

University support for students and their learning falls into two categories. Learning support includes IT Services, which has several hundred computers and the University Library, which across its three sites holds over a million volumes, subscribes to around 4,000 current periodicals, has a range of electronic sources of information and houses the Student Access to Independent Learning (S@IL) computer-based teaching and learning facilities. There are language laboratory facilities both for those students studying on a language degree and for those taking modules offered by the Institution-wide Language Programme. Student guidance and welfare support is provided by Personal Tutors, the Careers Advisory Service, the University's Special Needs Advisor, Study Advisors, Hall Wardens and the Students' Union.

In addition to the above, the School of Biological Sciences has several well-equipped teaching laboratories and dedicated computer laboratories providing students with in-house access to online educational material. The AMS building also houses an extensive Zoological museum and collection, and the plant sciences building a herbarium, living collection and adjacent botanic garden. These provide rich sources of material and specimens that are incorporated into several modules.

Career prospects

Reading Environmental Biology graduates are eligible for membership of the Institute of Biology and can achieve Chartered Biologist status. They are qualified to enter a variety of careers in the biological sciences, including work in industry (pharmaceuticals, biomedical, agrochemicals environmental assessment), government service (research institutes and bodies such as the Environment Agency) and other public bodies (local conservation units, animal charities). As numerate scientists they also enter a wide variety of commercial and business occupations.

Opportunities for study abroad

Students can take part in the Erasmus exchange programme in which they can spend the first term of Part 3 studying in a variety of other European Universities. Recent exchanges involving SBS students have taken place with the following: University of Tours, France; Odense University, Denmark; Uppsala University, Sweden; University College Cork, Ireland; University of Zaragoza, Spain; ENSA, Montpellier, France; University of Cagliari, Sardinia; Rostock University, Germany; Siena University, Italy.

Educational aims of the programme

The BSc in Environmental Biology is concerned especially with the diversity of living organisms and their natural habitats. It includes study of the biology of all types of organisms, from microorganisms to flowering plants and mammals, at a level ranging from the molecular, biochemical and cellular to the physiological, environmental and ecological. The subject matter of Parts 1 and 2 is broadly based with specialisation in Part 3 to provide a coherent, in-depth area

of study which the student will select. Students are expected to gain a broad understanding of the concepts underpinning biological sciences and to demonstrate the ability to complete a detailed study in an appropriate area and carry out an independent research project.

Programme Outcomes

The programme provides opportunities for students to develop and demonstrate knowledge and understanding, skills, qualities and other attributes in the following areas:

Knowledge and Understanding

A. Knowledge and understanding of:

- 1. The basic principles underlying the biological sciences
- 2. The variety of groups of living organisms, from viruses and bacteria to complex multicellular organisms such as mammals and flowering plants
- 3. Different levels of biological organisation of living organisms, from the molecular, biochemical and cellular to the physiological, environmental and ecological
- 4. In depth understanding of least one specialist field in their research project.

Teaching/learning methods and strategies

Compulsory and optional modules in Parts 1 and 2 introduce students to the diversity of living organisms and their habitats at a variety of levels. A wide range of teaching strategies is employed in these modules, initially in relatively large-group lecture and practical sessions in Part 1. Smaller group teaching comes to dominate in Parts 2 and 3 and includes. depending on the modules chosen. additional teaching methods such as seminars, fieldwork and discussion sessions. Students will also have the option of attending full-time field courses during the vacations. In Part 3 students will be able to select a specific area of biology for in-depth study and will undertake a research project with one-toone supervision by a member of academic staff or equivalent.

Assessment

Knowledge and understanding gained in the majority of modules will be assessed by a combination of coursework and formal examination. Some modules, for example field courses, will be assessed by 100% coursework. The project undertaken in Part 3 will be assessed primarily by written report.

Skills and other attributes

B. Intellectual skills – able to:

- 1. Address problems in a logical and structured manner
- 2. Manipulate and analyse numerical data
- 3. Construct and test hypotheses
- 4. Critically evaluate scientific literature and data

C. Practical skills – able to:

- 1. Conduct practical laboratory and/or fieldwork safely and successfully.
- 2. Design and undertake a programme of scientific investigation

Teaching/learning methods and strategies

Basic skills associated with problem solving and data analysis are taught in a specific module using a variety of teaching methods. These skills are further developed in individual modules, for example on Field Courses, students in small groups will be taught how to construct and logically investigate a hypothesis and to analyse the data produced. In Part 3 students are able to enhance their critical and analytical skills by undertaking a project and to demonstrate this by presenting the results in an accompanying dissertation.

Assessment

Assessment of 1 and 2 is by examination. Critical evaluation of scientific data and literature is assessed in essay and dissertation form.

Teaching/learning methods and strategies

Practical laboratory skills will be taught in Departmental teaching laboratories while fieldwork forms an integral part of several modules and is specifically taught on Field Courses. Further practical and field skills may also form part of the Part 3 project, where students will be taught on a one-to-one basis how to design and implement a programme of scientific investigation.

Assessment

Skill 1 is typically assessed by course work, while skill 2 is assessed by written report.

D. Transferable skills:

- 1. To be able to communicate effectively in both written and oral form
- 2. To be numerate and capable of approaching problems in a logical and structured manner
- 3. To be able to operate effectively as part of a team
- 4. To be familiar with IT operation and resources
- 5. To be able to work independently
- 6. To be able to effectively plan and time manage projects

Teaching/learning methods and strategies

A combination of seminars, demonstrations and practical approaches. In addition, other modules include aspects of different skills, for example Field Courses include teamworking as part of structured group work and many modules include an integral component of written and oral communication as coursework. In Part 3 students undertake a detailed independent project during which their individual planning and time management skills are developed through contact with their academic supervisor.

Assessment

Numeracy and Problem Solving are assessed by specific exam. Other skills are assessed by coursework. In addition, most individual modules include written and oral coursework as 30% of the total module assessment.

Please note - This specification provides a concise summary of the main features of the programme and the learning outcomes that a typical student might reasonably be expected to achieve and demonstrate if he/she takes full advantage of the learning opportunities that are provided. More detailed information on the learning outcomes, content and teaching, learning and assessment methods of each module can be found in the module description and in the programme handbook. The University reserves the right to modify this specification in unforeseen circumstances, or where the process of academic development and feedback from students, quality assurance processes or external sources, such as professional bodies, requires a change to be made. In such circumstances, a revised specification will be issued.
