Foundation Degree (FDSc) Computer Engineering For students entering Year 1 in 2007

Awarding Institution: Teaching Institution: Relevant QAA subject benchmarking group(s): Faculty of Science The University of Reading College of North West London Foundation Degree Programme length: 2 years full time or 3-4 years part time

Date of specification: 5/09/07 Programme Director: D.B.James Programme Adviser: M. Penton Board of Studies: Foundation Degrees in ICT and Computer Engineering Accreditation:

Summary of programme aims

The Foundation Degree (FD) provides a new model of vocational higher education based on close collaboration between employers and providers of higher education. The course is based on a coherent set of industry recognised and professional qualifications that are brought together to provide students with a FD level qualification.

The aim of the FD is develop the knowledge, skills and attributes of students already working in the computer engineering industry to enable them to develop into professional technicians able to play a disciplined and innovative role in development and maintenance across the industry.

Transferable skills

The University's Strategy for Teaching and Learning has identified a number of generic transferable skills, which all students are expected to have developed by the end of their degree programme. In following this programme, students will have had the opportunity to enhance their skills relating to career management, communication (both written and oral), information handling, numeracy, problem solving, team working and use of information technology.

As part of this programme students are expected to have gained experience in the following transferable skills: IT (programming, databases and use of standard software), technical writing, oral presentations, team-working, problem-solving, use of library resources, time-management, career planning and management and business awareness.

Programme content

The programme is based around two inter-related strands:

- Technical skills
- Professional engineering

The technical skills include: Networking, PC Systems, Programming, Operating Systems, Internet Technology, Electronic Devices and Circuits, Digital Circuits and Design and Communication Systems.

The professional engineering strand includes: Professional Skills, Project Work and Independent Study.

UCAS code:

Part 1

1 a

	SE0XB0	PC Systems 1	10	0
	SE0XC0	Internet Technology 1	10	0
	SE0XE0	Electronic Devices and Circuits	10	0
	SE1XF0	Programming	20	С
	SE1XG0	Operating Systems 1	10	С
	SE1XH0	Professional Skills 1	10	С
	SE1XI0	Work-based Independent Study	20	С
	SE1XK0	Digital Circuits and Design	20	С
Pa	rt 2			
	SE1XL0	Networking 2	10	С
	SE1XM0	PC Systems 2	10	С
	SE1XN0	Internet Technology 2	10	С
	SE1XT0	Communications Systems	10	С
	SE2XP0	Advanced Programming and Databases	10	Ι
	SE2XQ0	Operating Systems 2	10	Ι
	SE2XR0	Professional Skills 2	20	Ι

Progression requirements

Work-based Project

SE2XS0

The degree is in effect divided into two halves, Parts 1 and 2, each comprising modules worth 120 credits. To pass Part 1, a student must achieve an overall average of 40% over the first Part modules, and a mark of at least 30% in each of these modules amounting to not less that 100 credits. Students may take some of the modules contributing to Part 2 while they are completing the last group of modules forming Part 1.

40

I

To be eligible for the award of the Foundation Degree, a student shall normally be required to achieve an overall average of 40% over the 240 credits, and a mark of at least 30% in individual modules amounting to not less than 200 credits, and a mark of at least 40% in SE2XS0.

Summary of teaching and assessment

For the FD the relevance of skills and their application in a work-based environment, underpinned by academic knowledge and understanding is critical.

Teaching is organised in modules that typically involve lectures, work-based learning and practical work. Teaching will be delivered by partner colleges, in conjunction with employers, using a mixture of face to face teaching; web-based and distance learning methods; self-directed studies; project work; and problem-based learning. Typically a student will study between 60 and 120 credits per year. Students will be able where appropriate to gain the industry recognised or professional qualification.

Work-based learning is central to the FD and students undertaking the course will need to be working in the computer engineering industry. However it is recognised that a particular employer may not be practicing in all of the technical themes and the work-based learning will be personalised to suit the particular student and employer's circumstances.

The assessment of the FD will be based on University approved assessments, which will include a mixture of assignments and formal examinations. Where appropriate both formative and summative assessments will be work-based. The employer will provide appropriate mentoring in conjunction with the college.

Admission requirements

Entrants to this programme are normally required to have obtained: Grade C or better in English in GCSE, but otherwise each application will be treated on its merits

Admissions Tutor J Newton

Support for students and their learning

All students on this FD will be members of the University of Reading and able to use the facilities of the University.

Learning support includes IT Services, which has several hundred computers and the University Library, which across its three sites holds over a million volumes, subscribes to around 4,000 current periodicals, has a range of electronic sources of information and houses the Student Access to Independent Learning (S@IL) computer-based teaching and learning facilities. Student guidance and welfare support is provided by the College

All of the partners are members of the New Technology Institute Thames Valley Region (NTI TVR) and have NTI TVR facilities which will be available to the FD students.

Career prospects

The FD in Computer Engineering is designed to be industry oriented, for students who are already in employment. It is expected that graduates will continue to work within the Computer Engineering industry in a development and support role as a professional engineer.

Opportunities for study abroad or for placements

N/A

Educational aims of the programme

To develop the students' knowledge of the practice and underlying theory of Computer Engineering, necessary for them to continue in employment and reach professional engineer status in a wide variety of industries; to encourage their critical and analytical skills; and to develop their skills in applying practical concepts to the design, implementation and maintenance of computer systems.

Knowledge and Understanding

A. Knowledge and understanding of:	Teaching/learning methods and strategies
1. The well-established principles in	The areas 1a, to 1h, will be covered in the
Computer Engineering, including:	respective first and second year modules
a. Networking	\rightarrow associated with the technical skills theme.
b. PC Systems	
c. Programming	
d. Internet Technology	Areas 24. will be covered in each theme, in
e. Electronic Devices and Circuits	addition the Professional engineering strand
f. Operating Systems	modules will reinforce 3. and 4.
g. Digital Circuits and Design	
h. Communication Systems	Assessment
	Knowledge is tested through a mix of
2. The way in which those principles have	examination and practical work.
developed	
3. The main methods of enquiry in computer	
engineering	
4. Their own limitations and how this	
influences their field of study and is	
applicable in a work context.	

Skills and other attributes

B. Intellectual skills – able to:	Teaching/learning methods and strategies
1. Demonstrate knowledge and	By applying cognitive theoretical skills to
understanding related to aspects outlined	problem solving work related and case
above	studies in each technical skill
2. Apply such knowledge and understanding	
to information systems, including those used	The Professionals engineering modules will
in a work context	also address these issues. 4. will be
3. Critically evaluate and test a computer	particularly focussed on in Professional skills
system	2.
4. Recognise and conform to appropriate	
professional, ethical and legal practices	Assessment
5. Reflect and communicate	Skills and other attributes are tested through
	a mix of examination and practical work.
	The work-based individual project provides a
	major piece of work where by students can
	demonstrate all of these skills.

 C. Practical skills – able to: 1. Specify, design and construct Computer based systems, including those used in a work context 2. Evaluate systems 3. Recognise Risks and Safety aspects 4. Operate computer equipment effectively 	Teaching/learning methods and strategiesBy demonstrating and applying theoreticalskills and practical approaches to problemsolving in the form of coursework andpractical work. The Software Engineeringmodule will particularly address 1. While allthe technical skills themes will support this.Evaluation skills (2.) are featured in all levelC. and I. modules.3. will be covered in the Professionalengineering strand.4. will be a feature of the themes within thetechnical skills strand.AssessmentPractical skills and other attributes are testedthrough a mix of examination and practicalwork.
 D. Transferable skills – able to: 1. Effectively retrieve information 2. Present cases in a quantitative dimension. 3. Manage own learning and development. 4. Appreciate the need for continuing professional development (CPD), be able to plan and execute their own CPD 5. Organise and work as part of a team. 6. Plan and manage their own careers. 7. Communicate in a manner appropriate to the situation. 8. Effectively use Information Technology. 	Teaching/learning methods and strategiesThese skills will be taught as part of theprofessional engineering strand modules,particularly in the Professional Skills 1 and 2.AssessmentBy a mix of examination and practical work.The work-based individual projects willdemonstrate the majority of these skills.

Please note - This specification provides a concise summary of the main features of the programme and the learning outcomes that a typical student might reasonably be expected to achieve and demonstrate if he/she takes full advantage of the learning opportunities that are provided. More detailed information on the learning outcomes, content and teaching, learning and assessment methods of each module can be found in the module description and in the programme handbook. The University reserves the right to modify this specification in unforeseen circumstances, or where the process of academic development and feedback from students, quality assurance processes or external sources, such as professional bodies, requires a change to be made. In such circumstances, a revised specification will be issued
