# MChem Chemistry with a Year in Europe

#### For students entering Part 1 in 2007

Awarding Institution: Teaching Institution: Relevant QAA subject benchmarking group: Faculty of Life Sciences Programme Length: Date of specification: Programme Director: Programme Adviser: Board of Studies: Accreditation:

#### UCAS Code: F104

The University of Reading The University of Reading Chemistry

4 years Feb 2010 Dr MJ Almond Dr EM Page Chemistry The Royal Society of Chemistry

#### Summary of programme aims and learning outcomes:

The programme is designed to provide a broad and rigorous study of modern Chemistry and to develop the language skills and experience of the students taking this degree programme. It is accredited by the Royal Society of Chemistry. (For a fuller statement of the programme aims and learning outcomes see below.)

#### Transferable skills

The University's Strategy for Teaching and Learning has identified a number of generic transferable skills which all students are expected to have developed by the end of their degree programme. In following this programme, students will have had the opportunity to develop their skills relating to career management, communication (both written and oral), information handling, numeracy, problem-solving, team-working and use of information technology.

As part of this programme students are expected to have gained experience and show competence in the following skills: IT (word-processing, use of spreadsheets and databases), scientific writing, oral presentation, team-working, problem-solving, use of library resources, time-management, and career planning and management.

#### **Programme content**

The MChem Chemistry with a Year in Europe degree programme is divided into four Parts, each of 120 credits. The degree profile outlined below lists the compulsory modules and gives some indication of the optional modules from which the student must make a selection. Students choose such optional modules in consultation with the Programme Adviser or the Programme Director. The number of credits for each module is given after its title.

#### Part 1 (three terms) (2007-2008)

Compulsory Modules (80, 90 or 100 credits)			Level	
CH1IN1	Fundamentals of Atomic Structure and the Periodic Table	20	С	
CH1OR1	Shape, Structure and Reactivity in Organic Chemistry	20	С	
CH1PH1	CH1PH1 Physical Processes and Molecular Organisation		С	
CH1PRA	Laboratory Skills for Chemists	20	С	
The following module is <b>compulsory</b> for students who do not have an A-level pass in Mathematics.				
CH1M	Chemistry M	20	С	
The following module is <b>compulsory</b> for students who have an A-level pass at grade <b>C-E</b> in				
Mathemat	tics and <b>optional</b> for those with a grade <b>A-B</b> .			
CH1M2	Mathematics for Chemistry 2	10	С	

#### **Optional modules**

Students will select modules amounting to 20 credits (if they take CH1M), 30 credits (if they take CH1M2) or 40 credits (if they take neither) from outside the Department of Chemistry including one 20 credit module in a language at an appropriate level unless their language skills are deemed to be adequate.

# Part 2 (three terms) (2008-2009)

Compulsory Modules	(80 credits)	Credits	Level
CH2I1	Further Inorganic Chemistry	20	I
CH2O1	Further Organic Chemistry	20	I
CH2P1	Further Physical Chemistry	20	Ι

CH2A1	Analytical Chemistry & Professional Skills 2	20	Ι
<b>Optional modules</b> *	(40 credits)		
CH2AA1	Further Analytical Chemistry	20	I
CH2E1	Environmental Chemistry	20	I
CH2MMC	Medicinal Chemistry	20	I
*~ ! . !!!			

\*Students will normally select two chemistry modules or one chemistry module and a second language module, but these can be replaced by suitably weighted modules from other departments, timetable permitting.

# Part 3 (three terms) (2009-2010)

Part 3 of the programme takes place in a university in Europe and will include topics that match as closely as possible the core modules in the Part 3 MChem programme and a research-type project. A distance-learning programme will also be provided for the core modules.

Compulsory modules (120 credits)		Credits	Level
CH3EU	Year in Europe	120	Н

# Part 4 (three terms) (2010-2011)

	Compulsory m	odules (100 credits)	Credits	Level	Term	
	CH4SK	Chemistry in Industry and Professional Skills	10	М	Sp	
	CH4I1	Structure Determination	10	М	Au	
	CH401	Advanced Organic Chemistry-Synthetic Methodology	10	М	Au	
	CH4PR	Research Project	60	М	Au, Sp, Su	
	CH4P2	Biophysical and Bioinorganic Chemistry	10	М	Au	
Optional modules <sup>*</sup> (20 credits) to be chosen from the following modules not chosen at Part 3 or above:						
	CH4CR	Current Topics in Chemical Research	10	М	Au, Sp	
	CH4MM1	Medicinal Chemistry 1	10	М	Au	
	CH4MM2	Medicinal Chemistry 2	10	М	Sp	
	CH4I2	Catalysis	10	М	Sp	
		Language (Intermediate or Advanced)	20			

#### **Progression requirements:**

# Progression from Part 1 to Part 2

To gain a threshold performance at Part 1 a student shall normally be required to achieve an overall average of 40% over 120 credits taken in Part 1, and a mark of at least 30% in individual modules amounting to not less than 100 credits. In order to progress from Part 1 to Part 2, a student shall normally be required to achieve a threshold performance at Part 1, **and** 

not less than 40% in the compulsory core modules (CH1IN1, CH1OR1 & CH1PH1) averaged together **and** 

not less than 40 CH1PRA

# Progression from Part 2 to Part 3

To gain a threshold performance at Part 2 a student shall normally be required to achieve an overall average of 40% over 120 credits taken in Part 2, and a mark of at least 30% in individual modules amounting to not less than 100 credits. In order to progress from Part 2 to Part 3, a student shall normally be required to achieve a threshold performance at Part 2 and achieve an overall average of 50% over 120 credits taken in Part 2 (of which not less than 100 credits should normally be at I level or above), **and** 

not less than 50% in the compulsory core modules (CH2I1, CH2O1, CH2P1, CH2A1) averaged together, and

not less than 40% in the practical chemistry components of the core chemistry modules averaged together.

A pass of at least 40% in module CH4PR is required to qualify for an honours degree.

(Marks of between 40-49% will be sufficient to proceed to the BSc programme in Chemistry or BSc in Chemistry with Year in Industry)

# Summary of Teaching and Assessment

Teaching is organised in modules that involve a combination of lectures, tutorials, workshops and practical sessions. Modules are assessed by a mixture of coursework and formal examinations. At least 50% of the assessment will normally be by formal examination except for the Part 4 project, which will be assessed through laboratory work, the written report, a poster and an oral presentation.

Part 2 contributes 20%, Part 3 contributes 30 %, and Part 4 contributes 50 % towards the Final Degree classification.

The University's honours classification is as follows:

Mark	Interpretation
70% - 100%	First class
60% - 69%	Upper Second class
50% - 59%	Lower Second class
40% - 49%	Third class
35% - 39%	Pass below Honours standard
0% - 35%	Fail

#### Admission requirements

Entrants to this programme are normally required to have obtained: Grade C or better in Mathematics and English in GCSE; and to have achieved UCAS tariff: 280 from 3 A levels including B in Chemistry (two AS grades are acceptable in place of one Alevel), or International Baccalaureate: 30 points including 6 in chemistry, or Scottish Highers: BBBB including B in Chemistry, or Irish Leaving Certificate: BBBBC including B in Chemistry.

Admissions Tutor: Dr JM Elliott

email: j.m.elliott@rdg.ac.uk

# Support for students and their learning

University support for students and their learning falls into two categories. Learning support includes IT Services, which has several hundred computers, and the University Library, which across its three sites holds over a million volumes, subscribes to around 4,000 current periodicals, has a range of electronic sources of information and houses the Student Access to Independent Learning (S@IL) computer-based teaching and learning facilities. There are language laboratory facilities both for those students studying on a language degree and for those taking modules offered by the Institution-wide Language Programme.

Student guidance and welfare support is provided by Personal Tutors, School Senior Tutors, the Students' Union, the Medical Practice and the Student Services Centre. The Student Services Centre is housed in the Carrington Building and includes the Careers Advisory Service, the Disability Advisory Service, Accommodation Advisory Team, Student Financial Support, Counselling and Study Advisors. Student Services has a Helpdesk available for enquiries made in person or online (www.risisweb.reading.ac.uk), or by calling the central enquiry number on (0118) 378 5555. Students can get key information and guidance from the team of Helpdesk Advisers, or make an appointment with a specialist adviser; Student Services also offer drop-in sessions on everything from accommodation to finance. The Carrington Building is open between 8:30 and 17:30 Monday to Thursday (17:00 Friday and during vacation periods). Further information can be found in the Student Diary (given to students at enrolment) or on the Student website (www.reading.ac.uk/student).

Within the Department of Chemistry additional support is given through practical classes and tutorials in every Part of the degree programme. There are Course Advisers for every Part of the programme and the Director of Undergraduate Studies is also available for consultation and advice on academic and personal matters.

# **Career Prospects**

Although most previous graduates from this degree programme have proceeded to further study for a higher degree at Reading or elsewhere, others have successfully found employment in a wide range of situations without further study after graduation. An MChem degree in Chemistry from the University of Reading provides a strong platform from which to undertake a wide range of careers both within the chemical community and outside. Chemists are highly valued for their numerical and problem solving skills as well as their technical knowledge. They can use their chemical knowledge as research workers, technical assistants, or sales and marketing personnel within the chemical industry. Obviously, graduates with a good linguistic ability and experience of working abroad have an even wider range of employment open to them. Chemistry graduates from Reading have also found employment using their numerical and other skills in more general areas such as accounting, computing and teaching.

# **Opportunities for Study Abroad or for Placements**

Students will spend Part 3 of their degree programme studying at a university in Europe.

# Programme outcomes

The programme provides opportunities for students to develop and demonstrate knowledge and understanding, skills, qualities and other attributes in the following areas:

	Knowledge and Understanding				
Α.	Knowledge and understanding of: —	$\rightarrow$	Teaching/learning methods and strategies		
1.	the fundamental concepts and techniques chemistry		The knowledge required for the basic topics is provided in formal lectures supported by problem		
2.	a selection of more specialist topics in the three main branches of the subject and in		sets for students to tackle on their own and which are discussed formally in tutorial sessions with members of staff.		
3.	analytical chemistry the main techniques involved in practical work		2 is addressed particularly during Part 4 of the course.		
4.	the spectroscopic methods used to ident- ify molecules and to determine their structure and the basics of the underlying theory.		Practical classes are held throughout Parts 1 & 2 in which students develop their skills prior to applying them in their Parts 3 & 4 projects. 5 is normally addressed through modules provided		
5.	a modern European language (most likely French, German or Spanish).		by the Institution-wide Language Programme (IWLP) in Parts 1 and 2 and by study abroad during Part 3. Feedback on student work is provided by the discussion and return of work in tutorials and by regular workshop sessions during which students tackle unseen problems in the presence of academic staff who provide support. All practical work is marked and returned to the student. <i>Assessment</i> Most knowledge is tested through a combination of coursework and unseen formal examinations, although 3 is assessed by coursework. Dissertations and oral presentations also contribute to assessment, particularly in Parts 3 & 4.		
		_			
	ntellectual skills – able to: think logically analyse and solve problems – organise tasks into a structured form understand the evolving state of		<b>Teaching/learning methods and strategies</b> Logic is an essential part of the understanding and construction of synthetic methods and mechanistic pathways which form the framework for much organic and inorganic chemistry.		
5. 6.	knowledge in a rapidly developing area transfer appropriate knowledge and methods from one topic within the subject to another plan, conduct and write a report on an		While not exclusively the preserve of physical chemistry, problem solving plays a major part in this section of the course.		
7.	independent project construct a poster		Latest developments in the subject are introduced where appropriate, particularly in Part 4.		
8.	master a modern European language and demonstrate the ability to work in a foreign environment.		Practical reports in Part 1 & 2 provide training for the Parts 3 & 4 project reports.		
			Assessment 1-4 are assessed directly and indirectly in most parts of this chemistry course, while 5 contributes to the most successful work. 6 & 7 are assessed in the Part 3 & 4 project reports.		

# Knowledge and Understanding

C Practical Skills:- be able to	Teaching/learning methods and strategies
1. follow practical instructions safely and	Detailed practical manuals are provided for all
accurately	practical courses in Parts 1 & 2, together with
2. carry out a variety of experimental pro-	sources of recommended further reading. Staff and
cedures	post-graduate demonstrators are present during
3. measure and interpret various spectro-	every practical session to guide and help students
scopic techniques	and to mark their reports.
4. interpret quantitatively the results of their	Workshop sessions are held to assist students in
experiments	interpreting spectroscopic information obtained on
5. formulate safety protocols	unknown compounds.
6. devise suitable experimental methods for	In Part 4 students work on individual projects under
tackling a particular problem	the supervision of one or more members of staff. Assessment
	1 to 4 are tested to different extents by the practical
	work associated with Parts 1 - 3 of the chemistry
	course.
	3 is assessed through problems set in written
	examinations.
	5 is specifically assessed during the organic practical
	course in Part 2, although safe working procedures
	are emphasised at every stage.
	3 is specifically but not exclusively assessed within
	core module CH2A1.
	6 is assessed in the Parts 3 & 4 projects and during
	the placement in Europe.
<b>D. Transferable skills</b> – able to:	Teaching/learning methods and strategies
1. use IT (word-processing, spreadsheets and	The use of IT is embedded throughout the
chemical databases)	programme but, is specifically addressed in the core
2. communicate scientific ideas	modules CH1IN1 and CH1PH1.
3. give oral presentations	Team work and career planning are both part of
4. work as part of a team	module CH2A. Oral presentations are associated
5. use library resources	with modules CH3A1 and CH4PR.
6. manage time	Library resources are specifically addressed through
7. plan their career.	a small project in module CH4PR, and within the
	fourth year project.
	Time management is essential for the timely and effective completion of the programme
	Assessment
	1 - 5 contribute assessed coursework within the
	compulsory module on analytical and professional
	skills, CH2A1.
	Career planning is assessed through the 5 credit
	CMS course embedded within module CH2A1.
	and course embedded within module en2/(1.

*Please note:* This specification provides a concise summary of the main features of the programme and the learning outcomes that a typical student might reasonably expect to achieve and demonstrate if he/she takes full advantage of the learning opportunities that are provided. More detailed information on the learning outcomes, content and teaching, learning and assessment methods of each module can be found in module and programme handbooks.
