

MSc/Postgraduate Diploma/Postgraduate Certificate in Construction Cost Management For students entering in October 2008

Awarding Institution:	The University of Reading
Teaching Institution:	The University of Reading Faculty of Science
Programme length:	Minimum of 24 months and normally maximum of 60 months part time.
Date of specification:	October 2007
Programme Director:	Keith Hutchinson
Board of Studies:	Post-graduate Programmes in Construction Management
Accreditation:	Royal Institution Chartered Surveyors

Summary of programme aims

The programme provides a course for new entrants to the professional practice of Construction Cost Management, who have taken degrees in non-related disciplines. The programme is linked closely to the vocational training received in employment so that the programme and the employment experience together provides a fast track training for professional competence and qualification for high quality entrants to the profession from all first degree disciplines.

The programme provides an introduction to the fundamental academic subjects related to Construction Cost Management and an understanding of the latest academic theories and research, which are informing vocational practice in financial management of development projects.

Transferable skills

The University's Strategy for Teaching and Learning has identified a number of generic transferable skills, which all students are expected to have developed by the end of their degree programme. In following this programme, students will have had the opportunity to enhance their skills relating to career management, communication (both written and oral), information handling, numeracy, problem solving, team working and use of information technology.

The programme will develop the following transferable skills:

- Critical systems theory skills (CEMC01)
- Systems dynamics and systems evolution analysis skills (CEMC01)
- Reflective practitioner skills (CEMO33)
- Inter-professional team working skills (CEMC01, CEMO31)

Programme content

In addition to the compulsory and elective modules indicated below, students take an introductory, non-assessed module prior to the commencement of the assessed module which aims to provide the essential context for non-cognate graduates to the subjects related to construction and property development, in conjunction with their commencing vocational practice.

Compulsory Modules

		<i>Credits</i>	<i>Level</i>
CEMC01	<i>Principles of Project Management</i>	20	HE4
CEMC06	<i>Construction Law</i>	20	HE4
CEMC02	<i>Construction Cost Engineering</i>	20	HE4
CEMC08	<i>Construction Economics</i>	20	HE4

Elective Modules

CEMO30	Design Management	10	HE4
CEMO31	Human Resource Management	10	HE4
CEMIB9	Sustainable Design, Construction and Operation	10	HE4
CEMO37	Strategic Management	10	HE4
CEMO20	Risk and Value Management	10	HE4
REMB20	Real Estate Development: Analysis and Appraisal	10	HE4
CEMO33	Learning from Other Industries	10	HE4
CEMO32	International Construction	10	HE4
CEMC04	Vocational Practice Analysis	60	HE4

Part-time/Modular arrangements

Modules will be provided in one-week attendance periods at the University.

Progression requirements

Masters Award

To obtain the Masters award a student must take 180 credits consisting of the four compulsory core modules, four elective modules and the Vocational Practice Analysis. In the usual part-time pattern, there will be no formal interim progression stages. In this usual pattern a student will commence the project module at the beginning of the second year when four modules will have been successfully completed. To pass the MSc, students must gain an average mark of 50 or more overall including a mark of 50 or more for the Vocational Practice Analysis. In addition the total credit value of all modules marked below 40 must not exceed 30 credits and for all modules marked below 50 must be less than 55 credits.

Students who gain an average mark of 70 or more overall including a mark of 60 or more for the Vocational Practice Analysis and have no mark below 40 will be eligible for a Distinction. Those gaining an average mark of 60 or more overall including a mark of 50 or more for the dissertation and have no mark below 40 will be awarded eligible for a Merit.

Diploma Award

To obtain the Diploma award a student must take 120 credits including at least three compulsory core modules. To pass the Postgraduate Diploma students must gain an average mark of 50 or more. In addition the total credit value of all modules marked

below 40 must not exceed 30 credits and for all modules marked below 50 must be less than 55 credits.

Students who gain an average mark of 70 or more and have no mark below 40 will be awarded a Distinction. Those gaining an average mark of 60 or more and have no mark below 40 will be awarded a Merit.

Certificate Award

To obtain the Certificate award a student must take 60 credits consisting of three compulsory core modules. To pass the Postgraduate Certificate students must gain an average mark of 50 or more. In addition the total credit value of all modules marked below 40 must not exceed 10 credits.

Note: A module cannot be credited for more than one award.

Summary of teaching and assessment

The full detail of teaching and assessment in each module is given in the module descriptions.

Teaching

The general approach is to deliver lectures during study visits, usually of one-week module duration per module suited to the part-time mode of studying. This attendance period is supported with guided study through traditional private study and through web based learning;

Assessment

The general assessment pattern for each module is by examination and coursework, if the module is core/compulsory and by examination if the module is an elective. The detail assessment regulations are given in the module descriptions. The overall grade for the programme will be the aggregate mark of modules passed, weighted by credit value and classified as below. For further details see:

<http://www.reading.ac.uk/Exams/pgaward05-06.htm>

The programme will use the University's classification scheme:

- 70 - 100% Distinction
- 60 - 69% Merit
- 50 - 59% Pass
-

Failing categories:

- 40 – 49% Work below threshold standard
- 0 – 40% Unsatisfactory Work

Admission requirements

Entrants to this programme are normally required to have obtained:

- A good first degree, normally at least an upper second.
- Trainee management employment with a construction cost management organisation, which has an approved training programme.

Support for students and their learning

University support for students and their learning falls into two categories. Learning support includes IT Services, which has several hundred computers and the University Library, which across its three sites holds over a million volumes, subscribes to around 4,000 current periodicals, has a range of electronic sources of information and houses the Student Access to Independent Learning (S@IL) computer-based teaching and learning facilities. There are language laboratory facilities both for those students studying on a language degree and for those taking modules offered by the Institution-wide Language Programme. Programme Directors, the Careers Advisory Service, the University's Special Needs Advisor, Study Advisors, Hall Wardens and the Students' Union provide student guidance and welfare support.

Department support includes, in addition to the lecture programme during the week attendance period, access to a web based system providing course material, self-assessment questions and tutorial discussions. An induction programme is provided, which is incorporated into the first visit.

All modules are supported by material on a dedicated website. You will be given access to the material via the Blackboard platform, which can be accessed on or off campus.

The Blackboard sites are looked after by Nicola Tuson.

She can be contacted during office hours on 0118 931 7178 – or you can leave a message on voice mail.

If you are hoping to do some studying at your workplace, you must ensure that any firewall is removed by your IT department.

Career prospects

The specific aim is to develop specialist subject understanding in the theoretical disciplines of construction cost management. This is acquired from exposure to theory, research and methods of critical evaluation, bringing their work-based skills to bear in applying the lessons to their career environment. This will equip students who successfully complete the programme to:

- operate with increased authority within their area of core expertise
- manage others in a team environment
- obtain professional qualification and competence.

Opportunities for study abroad or for placements

At present there are no requirements, nor placement opportunities, for a period abroad. This is a reflection of the part-time nature of study, although there have been a number of students from other countries who have studied on Masters Programmes within the Framework of Modules to which this Programme belongs.

However, client organisations, especially in a European context may require this to be an opportunity for students, whereby the Programme offers a reverse study opportunity, that is in the UK at Reading. This would be addressed as special requirements under any proposal.

Educational aims of the programme

The programme aims to develop a capacity for cost management in complex organisations, specifically in a construction related environment in graduate students from disciplines unrelated to construction and cost management, who have commenced employment in this vocational area.

Programme Outcomes

Knowledge and Understanding

<p>A. Knowledge and understanding of:</p> <ol style="list-style-type: none">1. Cost management strategies and operational response in a project management environment2. Human resource management, particularly in work undertaken to contract3. Strategic management theories and approaches in practice4. Evaluating risk and generating value in a project management environment6. Financial management and accounting in a project environment7. Construction economics and the firm8. Understanding management strategy and practice in other industries9. Management of international construction10. Business systems to integrate real estate and management11. Legal requirements of operating in a project environment12 Commercial project decision-making.	<p>Teaching/learning methods and strategies</p> <p>The knowledge required for the theory and practice is delineated in formal lectures and seminars. Problem solving exercises are a common feature, which are used to articulate the concepts and relate them to the practical organisation setting and project-working environment.</p> <p>This is supported by conventional private study and web-based learning, some of which is to be taken up by the student on the same basis as conventional private study and some is directed learning based upon interactive discussion and problem solving exercises. Tutorials, through which students can obtain feedback on their non-assessed work, are conducted through the web. Feedback is also provided through coursework and tutorials, especially at the Dissertation stage of study.</p> <p><i>Assessment</i></p> <p>Most knowledge is tested through a combination of coursework and unseen formal examinations. Dissertation and oral presentations also contribute.</p>
---	---

Skills and other attributes

<p>B. Intellectual skills – able to:</p> <ol style="list-style-type: none">1. Evaluate the cost implications of design decisions and construction and engineering, operational requirements.2. Analyse and solve problems3. Think strategically4. Synthesis complex sets of information5. Understand the changing nature of knowledge and practice in the cost management of project environments and construction organisations6. Select and transfer knowledge and methods from other sectors to the project and construction based organisation.	<p>Teaching/learning methods and strategies</p> <p>Opportunities to understand theory and evaluate concepts are embedded throughout the programme. Emphasis is placed upon making judgements as to what bodies of knowledge and concepts are applicable to situations - which can be integrated, used in parallel or are in conflict or opposition to each other.</p> <p><i>Assessment</i></p> <p>The coursework is designed to test the student's ability to develop and command these intellectual skills. The Dissertation is the culmination of this process and a maturity of critical awareness and construction evaluation is tested at stage.</p>
---	--

C. Practical skills – able to:

1. Calculate and analyse costs of construction operations and design and engineering decisions.
2. Understand and construct financial plans for development projects.
2. Formulate and solve cost management problems within and across functional areas of the project and construction based organisation
3. Show a capability to act decisively in a co-ordinated way using theory, better practice and harness this to experience
4. Use concepts and theories to make judgements in the absence of complete data.

Teaching/learning methods and strategies

The Core Modules are designed to introduce the key theories and concepts to the student.

Opportunities are provided to apply these to specific situations through problem solving exercises and through coursework.

The Elective Modules focus upon specialist areas in which the practical lessons are explored.

Through this process the student is required to make connections between the course related material and their in-career work experience and/or their prior working experience in the field of management.

Assessment

The examinations test the breadth of practical knowledge application. Coursework assesses the depth of understanding of knowledge, which requires articulation of both the practical implication and application of knowledge.

<p>D. Transferable skills – able to:</p> <ol style="list-style-type: none"> 1. Develop the capacity to analyse and articulate complex management issues in the project and construction environment 2. Assess what knowledge is transferable from other context into the management approaches within this working context 3. Be confident in applying learning experience to practical management situations 4. Work as part of a team 5. Source material and knowledge from a variety of fields and effectively judge what can be integrated and applied 6. Attain and apply knowledge and information that will help develop their career. 	<p>Teaching/learning methods and strategies</p> <p>In depth evaluation of ideas and issues through seminar discussion, problem solving exercises conducted individually and in groups, plus coursework provide the mix to articulate these aspects both separately and together through different learning methods</p> <p><i>Assessment</i></p> <p>Coursework provides the main means of assessing how the introduction and development of these skills is progressing. The coursework will assess all the skill aspects to a general level of transfer appropriate at Masters level. The Vocational Practice project provides the main means to ascertain maturing in some of these areas within a focussed topic and hence in depth.</p>
<p>Please note - This specification provides a concise summary of the main features of the programme and the learning outcomes that a typical student might reasonably be expected to achieve and demonstrate if he/she takes full advantage of the learning opportunities that are provided. More detailed information on the learning outcomes, content and teaching, learning and assessment methods of each module can be found in the module description and in the programme handbook. The University reserves the right to modify this specification in unforeseen circumstances, or where the process of academic development and feedback from students, quality assurance processes or external sources, such as professional bodies, requires a change to be made. In such circumstances, a revised specification will be issued.</p>
