

**MEng Computer Science and Cybernetics
For students entering Part 1 in 2008/9**

UCAS code:

Awarding Institution:	University of Reading
Teaching Institution:	University of Reading
Relevant QAA subject Benchmarking group(s):	Computing
Faculty:	Science Faculty
Programme length:	4 years
Date of specification:	04/Apr/2011
Programme Director:	Dr Virginie Ruiz
Programme Advisor:	Dr Richard Mitchell Dr Gerard McKee
Board of Studies:	UG Systems Engineering
Accreditation:	British Computer Society

Summary of programme aims

The programme combines a sound understanding of computer science and cybernetics. It aims to impart skills in the assimilation of technically complex material, team working, meeting deadlines, the production of clearly written reports, and to introduce some current research in computing and cybernetics.

The programme aims to develop the students' knowledge of the theory and practice of modern computer science, necessary for them to secure employment as professional software engineers in a wide variety of industries; to encourage their critical and analytical skills; and to develop their skills in applying theoretical concepts to the practice of computer systems design.

Transferable skills

During the course of their studies at Reading, all students will be expected to enhance their academic and personal transferable skills in line with the University's Strategy for Learning and Teaching. In following this programme, students will have had the opportunity to develop such skills, in particular relating to communication, interpersonal skills, learning skills, numeracy, self-management, use of IT and problem-solving and will have been encouraged to further develop and enhance the full set of skills through a variety of opportunities available outside their curriculum.

As part of this programme students are expected to have gained experience and show competence in the following such skills: IT (word-processing, using standard and mathematical software, scientific programming), scientific writing, oral presentation, team-working, problem-solving, use of library resources, time-management, career planning and management, and business awareness.

Programme content

The profile below states which modules must be taken (the compulsory part), together with lists of modules from which the student must make a selection (the 'selected' modules). Students must choose such additional modules as they wish, in consultation with their programme adviser, to make 120 credits in each Part. The credit for each module is shown in the second column from the right. The codes C,I,H,M in the right most column show the level of each module.

Part 1 (three terms)

Compulsory modules

<i>Code</i>	<i>Module title</i>	<i>Credits</i>	<i>Level</i>
SE1CA5	Cybernetics and its Application	20	C
SE1EB5	Computer and Internet Technologies	20	C
SE1SA5	Programming	20	C
SE1SB5	Software Engineering	20	C
<i>And:</i>			
SE1CB5	Engineering Mathematics [for students who have A-level Maths]	20	C
<i>Or:</i>			
MA116	Mathematics for Computer Scientists [otherwise]	20	C

<i>And:</i>			
SE1EA5	Electronic Circuits	20	C
<i>Or:</i>			
SE1SC5	Computer Science Road Map	20	C

Part 2 (three terms)

Compulsory modules

<i>Code</i>	<i>Module title</i>	<i>Credits</i>	<i>Level</i>
EE2C2	Digital Circuit Design	10	I
CY2H6	Further Computer Systems	10	I
SE2P6	Engineering Applications	20	I
CS2TD7	Databases	10	I
CS2L7	Human Computer Interaction	10	I
CY2G2	Signals	10	I
CY2K9	Neuroscience	10	I
CY2D9	Neural Nets	10	I
CY2A9	Control Systems	10	I
CY2C9	Control and Measurement	10	I

Students who took SE1EA5 in Part 1 should take:

CS2T7	Introduction to Algorithms	10	I
-------	----------------------------	----	---

Otherwise:

CY2B9	Electronics for Intelligent Systems	10	I
-------	-------------------------------------	----	---

Part 3 (three terms)

Compulsory modules

<i>Code</i>	<i>Module title</i>	<i>Credits</i>	<i>Level</i>
CY3A2	Computer Controlled Feedback Systems	20	H
SE3Z10	Social, Legal and Ethical Aspects of Science and Engineering	10	H
CY3G2	Modern Heuristics	10	H
SE3P9	MEng Group Project	30	H
CY3B9	Machine Intelligence	10	H
SE3S10	Law and Management	10	H

Optional modules must be chosen to give a total of 120 credits:

CS3A2	Computer Networking	10	H
CS3U7	Image Analysis	10	H
CS3Y7	Robot Systems	10	H
CY3F8	Virtual Reality	10	H
CY3J8	Machines in Motion	10	H
CY3K7	Bionics	10	H
CY3L2	Mechatronics	10	H
CY2N9	Mechanical Design	10	I
LA1XX1	Institution Wide Language Programme	20	C

Part 4 (three terms)

Compulsory modules

<i>Mod Code</i>	<i>Module Title</i>	<i>Credits</i>	<i>Level</i>
SE4RP11	Research Project	50	M
SE4RS11	Research Studies	10	M
CY4B2	Mind as Motion	10	M

Optional modules

Select modules worth 50 credits from:

CS4E7	Computational Robotics	10	M
CS4V10	Visual Intelligence	10	M
CS4Z4	Computer Security	10	M
CY4C9	Advanced Neural Networks	10	M
CY4F8	Swarm Intelligence and Artificial Life	10	M
CY4I7	Biomechanics	10	M
CY4J9	Manipulator Dynamics and Haptics	10	M
CY4K7	Learning Classifier Systems	10	M
CY4M8	Medical Image and Signal Processing	10	M
MMM038	Practice of Entrepreneurship	20	M

Progression requirements

To gain a threshold performance at Part 1 and qualify for the CertHE a student shall normally be required to achieve an overall average of 40% over 120 credits taken in Part 1, where all the credits are at level C or above, and a mark of at least 30% in individual modules amounting to not less than 100 credits. In order to progress from Part 1 to Part 2, a student shall normally be required to achieve a threshold performance at Part 1, and to have no module mark below 30%.

To gain a threshold performance at Part 2 and qualify for the DipHE a student shall normally be required to achieve an overall average of 40% over 120 credits taken in Part 2, and a mark of at least 30% in individual modules amounting to not less than 100 credits. In order to progress from Part 2 to Part 3, a student shall normally be required to achieve a threshold performance at Part 2 and achieve an overall average of 60% in the 120 credits taken in Part 2. A student whose average is below 60% may be qualified for the BSc CS/Cyb degree.

A student must obtain at least 40% in both their projects (SE3P9 and SE4RP11) to be eligible for honours.

The relative contributions to the final assessment of Parts 2, 3 and 4 are 1:2:2.

Summary of Teaching and Assessment

Teaching is organised in modules that typically involve both lectures and practical work. Most modules are assessed by a mixture of coursework and formal examination. However, some modules are assessed only as coursework, while others are assessed solely by examination. Details are given in the relevant module descriptions.

Admission requirements

Entrants to this programme are normally required to have obtained:

A minimum of GCSE: Mathematics Grade B or higher and Combined Science Grade B or higher.

UCAS Tariff: 320 points with a Grade B or higher in Mathematics or Science.

International Baccalaureate: 32 points.

Equivalent qualifications are acceptable.

Admissions Tutor: Dr Faustina Hwang

Support for students and their learning

University support for students and their learning falls into two categories. Learning support is provided by a wide array of services across the University, including: the University Library, Student Employment, Experience and Careers Centre (SECC), In-sessional English Support Programme, the Study Advice and Mathematics Support Centre teams, IT Services and the Student Access to Independent Learning (S@il) computer-based teaching and learning facilities. There are language laboratory facilities both for those students studying on a language degree and for those taking modules offered by the Institution-wide Language Programme. Student guidance and welfare support is provided by Personal Tutors, School Senior Tutors, the Students' Union, the Medical Practice and the Student Services Directorate. The Student Services Directorate is housed in the Carrington Building and includes Student Employment, Experience and Careers Centre (SECC), the Disability Advisory Service, Accommodation Advisory Team, Student Financial Support and Counselling. Student Services has a Helpdesk available for enquiries made in person or online (www.risisweb.reading.ac.uk), or by calling the central enquiry number on (0118) 378 5555. Students can get key information and guidance from the team of Helpdesk Advisers, or make an appointment with a specialist adviser; Student Services also

offer drop-in sessions on everything from accommodation to finance. The Carrington Building is open between 8:30 and 17:30 Monday to Thursday (17:00 Friday and during vacation periods). Further information can be found on the Student website (www.reading.ac.uk/student).

Within the providing School additional support is given through practical laboratory classes. The development of problem-solving skills is assisted by appropriate assignment and project work. There is a Programme Adviser to offer advice on the choice of modules within the programme. Course handbooks are provided for each Part of the course: these give more details about the modules which make up the degree. In addition, the School produces a Handbook for Students, which provides general information about the staff and facilities within the school.

Career prospects

In recent years most students who have followed this programme have gone into careers in the software industry. These range from small start up companies to multi-nationals and several graduates have started their own businesses. Others have joined research groups in university and industry, the public service, and the teaching professions. Graduates from this programme are partially exempt from the professional examinations of the British Computer Society. After a further year of higher education and a period of professional experience, a graduate can expect to achieve Chartered Engineer status.

Opportunities for study abroad or for placements

N/A

Programme Outcomes

The programme provides opportunities for students to develop and demonstrate knowledge and understanding, skills, qualities and other attributes in the following areas:

Knowledge and Understanding

A. Knowledge and understanding of:

1. Computer science and cybernetics
2. Information technology
3. Appropriate mathematical techniques, including the use of mathematics as a tool for communicating results, concepts and ideas
4. Business context
5. Engineering practice

Teaching/learning methods and strategies

The knowledge required for 1-5 is obtained via lectures, exercises, practicals, assignments and project work. Appropriate IT packages are taught. Practical demonstrators and project supervisors advise students, and feedback is provided on all continually assessed work. As the course progresses students are expected to show greater initiative. There is more project work than for the BSc, with substantial projects in Parts 3 and 4.

Assessment

Most knowledge is tested through a combination of practicals, assignments and formal examinations. Students write reports on many assignments, and also make oral presentations of their work.

Skills and other attributes

B. Intellectual skills - able to:

1. Select and apply appropriate computer based methods, mathematical and scientific principles for analysing both computer and cybernetic systems
2. Analyse and solve problems
3. Organise tasks into a structured form
4. Understand the evolving state of knowledge in a rapidly developing area
5. Transfer appropriate knowledge and methods

Teaching/learning methods and strategies

Appropriate software, mathematical, scientific and IT skills and tools are taught in lectures, and problems to be solved are given as projects or assignments. Project planning is part of the Part 3 project, and written and oral presentations are required for various assignments and projects. In the latter part of the course some research topics in computer science and cybernetics are introduced.

from one topic within the subject to another

6. Plan, conduct and write a report on a project or assignment
7. Prepare an oral presentation

C. Practical skills - able to:

1. Use appropriate mathematical or IT tools
2. Program a computer to solve problems
3. Use relevant laboratory equipment and analyse the results critically
4. Design, build and test a system
5. Research into computer science and cybernetics problems
6. Utilise project management methods
7. Present work both in written and oral form
8. Manage projects effectively

D. Transferable skills - able to:

1. Use IT tools
2. Acquire, manipulate and process data
3. Use creativity and innovation
4. Solve problems
5. Communicate scientific ideas
6. Give oral presentations
7. Work as part of a team
8. Use information resources
9. Manage time

Assessment

Skills 1-5 are assessed partly by examination, though sometimes also by project or assignment work. Skills 6 and 7 are assessed as part of project work.

Teaching/learning methods and strategies

Mathematical and IT tools are introduced in lectures and their use is assessed by examinations and assignments.

Programming assignments are set, and students may write programs to solve other projects.

Laboratory practicals and projects are used to teach skill 3, and projects are used for skills 4, 5, 6, 7 and 8.

Assessment

Skills 1 and 5 are tested in coursework and in examinations. Skills 2, 5 and 7 are tested by assignments and projects, 3 is assessed in practicals and sometimes in projects, Skills 4, 5, 6, 7, 8 are assessed through project work.

Teaching/learning methods and strategies

IT tools are taught partly in lectures, mainly through practical sessions and assignments.

Data skills are acquired in laboratory and projects. Creativity and innovation and problems solving are experienced through projects, as are team working, time management and presentations. Use of information resources, such as the library and IT methods is experienced through projects and assignments.

Assessment

Some skills, like the use of IT tools and ability to communicate orally and in written form are directly assessed in assignments or projects. Other skills are not directly assessed but their effective use will enhance the students overall performance.

Please note - This specification provides a concise summary of the main features of the programme and the learning outcomes that a typical student might reasonably be expected to achieve and demonstrate if he/she takes full advantage of the learning opportunities that are provided. More detailed information on the learning outcomes, content and teaching, learning and assessment methods of each module can be found in the module description and in the programme handbook. The University reserves the right to modify this specification in unforeseen circumstances, or where the process of academic development and feedback from students, quality assurance process or external sources, such as professional bodies, requires a change to be made. In such circumstances, a revised specification will be issued.
