

BSc Mathematical Studies
For students entering Part 1 in 2008/9

UCAS code: G152

Awarding Institution:	University of Reading
Teaching Institution:	University of Reading
Relevant QAA subject Benchmarking group(s):	Mathematics, Statistics and Operational Research
Faculty:	Science Faculty
Programme length:	3 years
Date of specification:	04/Oct/2010
Programme Director:	Dr Karen Ayres
Programme Advisor:	Dr Titus Hilberdink
Board of Studies:	Maths/Met/Physics
Accreditation:	This programme will meet the education requirements of Chartered Mathematician designation awarded by the Institute of Mathematics and its Applications when followed by subsequent training and experience in employment to obtain equivalent competencies to those specified by the Quality Assurance Agency (QAA) for taught masters degrees

Summary of programme aims

The aim of the Mathematical Studies programme is to produce graduates who are well educated in mathematical problem-solving and statistical techniques and have a range of appropriate subject-specific and transferable skills. The degree achieves this by concentrating on the core areas of mathematical methods and statistics, with lesser emphasis on the theoretical topics and specialised applications.

Transferable skills

During the course of their studies at Reading, all students will be expected to enhance their academic and personal transferable skills in line with the University's Strategy for Learning and Teaching. In following this programme, students will have had the opportunity to develop such skills, in particular relating to career management, communication (both written and oral), information handling, numeracy, team working, use of IT and problem-solving and will have been encouraged to further develop and enhance the full set of skills through a variety of opportunities available outside their curriculum.

By the end of the programme students are expected to have gained experience and show competence in the following transferable skills: IT (word-processing, using standard, mathematics and statistics software), scientific writing, oral presentation, team-working, problem-solving, use of library resources, time-management, and career management and planning.

Programme content

The profile which follows states which modules must be taken (the compulsory part), together with one or more lists of modules from which the student must make a selection (the 'selected' modules). Students must choose such additional modules as they wish, in consultation with their programme adviser, to make 120 credits in each Part. The number of credits per module and the level of each module are shown after its title.

Part 1 (three terms)

Compulsory modules

<i>Module</i>	<i>Title</i>	<i>Credits</i>	<i>Level</i>
AS1A	Communicating with Statistics	20	C
AS1B	Probability and Statistical Methods	20	C
MA11A	Introduction to Analysis	20	C
MA11B	Calculus and Applications	20	C
MA11C	Matrices, Vectors and Applications	20	C
SE1TQ5	Commercial off-the-shelf Software 1	20	C

Part 2 (three terms)*Compulsory modules*

<i>Mod Code</i>	<i>Module Title</i>	<i>Credits</i>	<i>Level</i>
AS2A	Statistical Theory and Methods	20	I
AS2B	Linear Models	20	I
MA24A	Analysis	20	I
MA24F	Communicating Mathematics	20	I
MA24G	Elementary Algebra	20	I
MA24L	Differential Equations and Fourier Series	20	I

Part 3*Optional modules:**(i) 20 credits from:*

List A

MA37B	Topics in Applied Mathematics	20	H
MA37C	Topics in Pure Mathematics	20	H

(ii) 20 credits from:

List B

MA3CA	Complex Analysis	10	H
MA3CV	Calculus of Variations	10	H
MA3D7	History of Mathematics and its Applications	10	H
MA3Z7	Number Theory	10	H

(iii) 20 credits from:

List C

MA3VC	Vector Calculus	10	H
MA3NM	Numerical Methods	10	H
MA3LA	Linear Algebra	10	H
MA3CT	Coding Theory	10	H
AS3D	Operational Research Techniques	20	H

(iv) Additional Mathematics or Statistics modules at Level H or M to total 40 credits, of which at least 20 must be Mathematics. These can be selected from lists A, B or C above, or list D below. (Your choice should not clash with your selections to fulfil requirements (i), (ii) or (iii) above.)

List D

MA3AL	Algebra	10	H
MA3DY	Dynamics	10	H
MA3NLE	Analysis of Numerical Techniques for Linear Equations and Eigenvalue Problems	10	H
MA3DS	Dynamical Systems	10	H
MA3C7	Boundary-value Problems	10	H
MA3W7	Control Systems	10	H
MA3ASP	Applied Stochastic Processes	10	H
MA3SM	Modelling of Soft Matter	10	M
MA3CM	Classical Mechanics	10	H
MA3MB	Mathematical Biology	10	H
MA3FM	Fluid Mechanics	10	H
MA3AM1	Asymptotic Methods I	10	H

MA3MC	Mathematics for Commerce	10	H
AS3A	Advanced Statistical Modelling	20	M
AS3C	Analysis of Structured Data	20	H
AS3G	Study Design and Sampling Methods	20	H

(v) Additional modules at Level H or M to make a total of 120 credits in Part 3. These modules can be selected from the lists above, or from elsewhere in the University. (Your choice should not clash with your selections to fulfil requirements (i), (ii), (iii) or (iv) above.) Note that most modules have pre-requisites and co-requisites which students must undertake. Information regarding pre-requisites and co-requisites can be found in the appropriate module description. Students on four year programmes need to be especially aware of any pre- and co-requisites of Part 4 modules when selecting Part 3 options.

Progression requirements

To gain a threshold performance at Part 1 and qualify for the CertHE a student shall normally be required to achieve an overall average of 40% over 120 credits taken in Part 1, where all the credits are at level C or above, and a mark of at least 30% in individual modules amounting to not less than 100 credits. In order to progress from Part 1 to Part 2, a student shall normally be required to achieve a threshold performance at Part 1, and obtain an average of at least 40% in the Mathematics modules taken together and an average of at least 40% in the Statistics modules taken together and have no module mark below 30%.

To gain a threshold performance at Part 2 and qualify for the DipHE a student shall normally be required to achieve an overall average of 40% over 120 credits taken in Part 2, and a mark of at least 30% in individual modules amounting to not less than 100 credits. In order to progress from Part 2 to Part 3, a student shall normally be required to achieve a threshold performance at Part 2.

Part 2 contributes one third of the final assessment and Part 3 the remaining two thirds.

Summary of teaching and assessment

Teaching is organised in modules that typically involve both lectures and problems. The assessment is carried out within the University's degree classification scheme, details of which are in the programme handbooks. The pass mark in each module is 40%. Modules in Part 1 and 2 are assessed by a mixture of coursework and formal examination. There are some modules which are assessed wholly by coursework and others wholly by examination; the details are given in the module descriptions.

Admission requirements

Entrants to this programme are normally required to have obtained:

Grade C or better in English in GCSE; and achieved

UCAS Tariff: A Level: 220 points including grade C in A Level Mathematics; or

International Baccalaureat: 30 points including 6 in Higher Mathematics; or

Advanced GNVQ: Merit in one of the following subject areas: Engineering, Information Technology or Science, accompanied by A Level Mathematics Grade B or

Scottish Highers: Grade A in Mathematics and two Bs and a C in three other subjects.

Irish Leaving Certificate: Grade A in Mathematics and three Bs and a C in four other subjects

Two AS grades are accepted in place of one A-Level except in Mathematics.

Admissions Tutor: Dr Graham Williams

Support for students and their learning

University support for students and their learning falls into two categories. Learning support includes IT Services, which has several hundred computers, and the University Library, which across its three sites holds over a million volumes, subscribes to around 4,000 current periodicals, has a range of electronic sources of information and houses the Student Access to Independent Learning (S@il) computer-based teaching and learning facilities. There are language laboratory facilities both for those students studying on a language degree and for those taking modules offered by the Institution-wide Language Programme. Student guidance and welfare support is provided by Personal Tutors, School Senior Tutors, the Students' Union, the Medical Practice and the Student Services Directorate. The Student Services Directorate is housed in the Carrington Building and includes the Careers Advisory Service, the Disability Advisory Service, Accommodation Advisory Team, Student Financial Support, Counselling and Study Advisors. Student Services has a Helpdesk available

for enquiries made in person or online (www.risisweb.reading.ac.uk), or by calling the central enquiry number on (0118) 378 5555. Students can get key information and guidance from the team of Helpdesk Advisers, or make an appointment with a specialist adviser; Student Services also offer drop-in sessions on everything from accommodation to finance. The Carrington Building is open between 8:30 and 17:30 Monday to Thursday (17:00 Friday and during vacation periods). Further information can be found in the Student website (www.reading.ac.uk/student).

Within the Mathematics Department additional support is given through tutorials in Parts 1 and 2. The development of problem-solving skills is assisted by extensive provision of model solutions to problems. There is a Course Adviser to offer advice on the choice of modules within the programme.

Career prospects

In recent years students who have followed this programme have gone into jobs as scientific officer (DERA), trainee accountant, teacher training and clinical data assistant.

Opportunities for study abroad or for placements

Although there are no formal arrangements for this programme, informal arrangements may be possible.

Programme Outcomes

The programme provides opportunities for students to develop and demonstrate knowledge and understanding, skills, qualities and other attributes in the following areas:

Knowledge and Understanding

A. Knowledge and understanding of:

1. The fundamental concepts and techniques of calculus, analysis, linear algebra, and numerical mathematics
2. The fundamental concepts and techniques of data summary and presentation, statistical inference and linear modelling
3. The use of the basic techniques of mathematics in applicable areas of mathematics, such as differential equations, coding theory and numerical analysis
4. The use of statistical software in data analysis
5. A selection of more specialist optional topics

Teaching/learning methods and strategies

The knowledge required for the basic topics is delineated in formal lectures supported by problem sets for students to tackle on their own. In Part 1 these are supported by tutorials and practical classes through which students can obtain additional help and feedback on their work. In the later parts of the course students are expected to work at additional problems on their own and seek help when required. Model solutions are provided for problems set.

Assessment

Most knowledge is tested through a combination of coursework and unseen formal examinations. Dissertations and oral presentations also contribute in other parts of the programme.

Skills and other attributes

B. Intellectual skills - able to:

1. Think logically
2. Analyse and solve problems
3. Organise tasks into a structured form
4. Transfer appropriate knowledge and methods from one topic within the subject to another
5. Conduct independent study of a chosen topic and report on the results

Teaching/learning methods and strategies

Logic is an essential part of the understanding and construction of mathematical proofs and structured computer programs and is embedded throughout the programme. The quality of a solution to a problem is substantially determined by the structure of that response; analysis, synthesis, problem solving, integration of theory and application, and knowledge transfer from one topic to another are intrinsic to high-level performance in the programme.

Assessment

Skills 1- 3 are assessed indirectly in most parts of

the programme, while 4 contributes to the more successful work. 3 and 5 are assessed in the report produced as part of the third year project.

C. Practical skills - able to:

1. Understand and construct mathematical proofs
2. Formulate and solve mathematical and statistical problems
3. Analyse numerical methods and respond to the issues of accuracy, stability and convergence
4. Use statistical software in an effective manner
5. Write and defend a report on a chosen topic

Teaching/learning methods and strategies

Mathematical proof is taught in Part 1 lectures and reinforced in practical classes. Problem solving is introduced in lectures in Part 1 and forms a large part of subsequent Mathematics. Lectures, practical work and assignments in Statistics are designed to enhance skills 2 and 4. Numerical analysis courses introduce and develop the ideas of accuracy, stability and convergence, illustrated by practical tasks.

Assessment

Skills 1 and 2 are tested both formatively in coursework and summatively in examinations. Skill 4 is assessed in coursework that involves computer-based analysis. 5 is assessed through the project dissertation and its oral presentation.

D. Transferable skills - able to:

1. Use IT (word-processing, standard, mathematical and statistical software)
2. Communicate scientific ideas
3. Give oral presentations
4. Work as part of a team
5. Use library and internet resources
6. Manage time
7. Plan their career

Teaching/learning methods and strategies

The use of IT is embedded throughout the programme, and in the packages Excel and Minitab taught in Part 1. Team work and career planning are part of one Part 2 module. Communication skills are the focus of one module in Part 2, and these are deployed in the final year project. Time management is essential for the timely and effective completion of the programme. Library and internet resources are required for the small project within one Part 2 module and the final year project, and contribute to the best performances throughout.

Assessment

Skills 1 and 2 are assessed through coursework. Skills 3 - 5 and 7 contribute assessed coursework towards the Part 2 module Communicating Mathematics, and 2, 3 and 5 also in the project. The other skills are not directly assessed but their effective use will enhance performance in later modules.

Please note - This specification provides a concise summary of the main features of the programme and the learning outcomes that a typical student might reasonably be expected to achieve and demonstrate if he/she takes full advantage of the learning opportunities that are provided. More detailed information on the learning outcomes, content and teaching, learning and assessment methods of each module can be found in the module description and in the programme handbook. The University reserves the right to modify this specification in unforeseen circumstances, or where the process of academic development and feedback from students, quality assurance process or external sources, such as professional bodies, requires a change to be made. In such circumstances, a revised specification will be issued.
