

MEng Electronic Engineering
For students entering Part 1 in 2010/1

UCAS code: H603

Awarding Institution:	University of Reading
Teaching Institution:	University of Reading
Relevant QAA subject Benchmarking group(s):	Engineering
Faculty:	Science Faculty
Programme length:	4 years
Date of specification:	15/May/2013
Programme Director:	Dr Virginie Ruiz
Programme Advisor:	Dr Oswaldo Cadenas Prof Chris Guy
Board of Studies:	UG Systems Engineering
Accreditation:	Institution of Engineering and Technology (IET)

Summary of programme aims

To develop the students' knowledge of the theory and practice of modern electronic engineering, necessary for them to meet the educational requirements set out by the ECUK for Chartered Engineer status; to encourage their critical and analytical skills; to develop their skills in applying theoretical concepts to the practice of electronic systems design; to provide experience of industrial engineering practice; and to provide a firm foundation for a career in design, management, or research and development.

Transferable skills

During the course of their studies at Reading, all students will be expected to enhance their academic and personal transferable skills. In following this programme, students will have had the opportunity to develop such skills, in particular relating to communication, interpersonal skills, learning skills, numeracy, self-management, use of IT and problem-solving and will have been encouraged to further develop and enhance the full set of skills through a variety of opportunities available outside their curriculum.

As part of this programme students are expected to have gained experience and show competence in the following transferable skills: IT (word-processing, using standard and mathematical software, scientific programming), scientific writing, oral presentation, team-working, problem-solving, use of library resources, time-management, career planning and management, and business awareness.

Programme content

The profile which follows states which modules must be taken (the compulsory part), together with one or more lists of modules from which the student must make a selection (the selected modules). Students must choose such additional modules as they wish, in consultation with their programme adviser, to make 120 credits in each Part. The number of modules credit for each module is shown after its title.

Part 1 (three terms)

Compulsory modules

<i>Code</i>	<i>Module title</i>	<i>Credits</i>	<i>Level</i>
SE1CA9	Cybernetics and its Application	20	4
SE1CB9	Engineering Mathematics	20	4
SE1SA5	Programming	20	4
SE1SB9	Software Engineering	20	4
SE1EA5	Electronic Circuits	20	4
SE1EB9	Computer and Internet Technologies	20	4

Part 2 (three terms)

Compulsory modules

<i>Mod Code</i>	<i>Module Title</i>	<i>Credits</i>	<i>Level</i>
SE2SM11	Systems Design and Project Management	20	5
SE2SP11	Signal Processing	20	5

SE2EM11	Embedded Microprocessors and Digital Systems	20	5
SE2CS11	Control Systems	10	5
SE2PL11	Programmable Logic and HDL's	10	5
SE2CA11	Computer Architecture	10	5
SE2SD11	Sensors and Devices	10	5
SE2TE11	Telecommunications	10	5

Choose 10 credits from:

SE2NN11	Neural Networks	10	5
SE2RM11	Robotics Sensors and Mechanics	10	5
SE2RS11	Robotic Systems	10	5

Part 3 (three terms)

Compulsory modules

<i>Code</i>	<i>Module title</i>	<i>Credits</i>	<i>Level</i>
SE3GP11	MEng Group Project	40	6
SE3SL11	Social, Legal and Ethical Aspects of Science and Engineering	10	6
SE3LM11	Law and Management	10	6
SE3UI11	USB Integration	10	6
SE3CN11	Computer Networking	20	6

Optional modules

Select modules worth 30 credits from:

SE3SI11	System Identification and Control	20	6
SE3SS11	State Space	10	6
SE3ME11	Mechatronics	10	6
SE3IA11	Image Analysis	10	6
SE3SE11	Sustainable Electrical Energy	10	6
SE3MS11	Measurement Systems	10	6
SE3AE11	Analogue Electronics	10	6
LA1XX1	Institution Wide Language Programme	20	4

Part 4 (three terms)

Compulsory modules

<i>Code</i>	<i>Module title</i>	<i>Credits</i>	<i>Level</i>
SE4WC12	Wireless and Cellular Networking	20	7

Either:

SE4IP11	Industrial Project	60	7
---------	--------------------	----	---

or both:

SE4RP11	Research Project	50	7
SE4RS11	Research Studies	10	7

Select modules worth 40 credits from:

SE4NN12	Advanced Neural Networks	10	7
SE4NC12	Nonlinear and Optimal Control	10	7
SE4DA12	DSP Architectures	10	7
SE4AD12	Advanced DSP	10	7
SE4RW12	Wireless Communications for the Real World	10	7
SE4VI12	Visual Intelligence	10	7
MMM038	Practice of Entrepreneurship	20	7

Progression requirements

To gain a threshold performance at Part 1 and qualify for the CertHE a student shall normally be required to achieve an overall average of 40% over 120 credits taken in Part 1, where all the credits are at level 4 or above, and a mark of at least 30% in individual modules amounting to not less than 100 credits. In order to progress from Part 1 to Part 2, a student shall normally be required to achieve a threshold performance at Part 1, and to have no module mark below 30%.

To gain a threshold performance at Part 2 and qualify for the DipHE a student shall normally be required to achieve an overall average of 40% over 120 credits taken in Part 2, and a mark of at least 30% in individual modules amounting to not less than 100 credits. In order to progress from Part 2 to Part 3, a student shall normally be required to achieve a threshold performance at Part 2 and achieve an overall average of 60% in the 120 credits taken in Part 2. A student whose average is below 60% may be qualified for the BEng in Electronic Engineering degree.

To be eligible for honours the student must obtain an overall average mark of at least 40% and at least 40% in both the Part 3 project and the Part 4 project.

Part 2 contributes 20% of the final degree assessment, Parts 3 and 4 each contribute 40%.

Summary of Teaching and Assessment

Teaching is organised in modules that typically involve lectures and tutorial or laboratory practicals. Most modules are assessed by a mixture of coursework and formal examination. Some modules, in particular the Part 3 and Part 4 projects are assessed only as coursework. Details are given in the relevant module description.

Admission requirements

Entrants to this programme are normally required to have obtained:

Grade C or better in English in GCSE; and achieved

A Level: 300 points with grade B in A Level Mathematics and Physics; or

International Baccalaureat: 30 points including 6 in Higher Mathematics; or

Advanced GNVQ: Distinction in one of the following subject areas: Engineering, Information Technology or Science, accompanied by A Level Mathematics Grade B; or

Scottish Highers: Grade A in Mathematics and Bs in three other subjects

Irish Leaving Certificate: Grade A in Mathematics and three Bs and a C in four other subjects; or BTEC: with mostly distinctions in individual subjects but including at least a distinction in Mathematics.

Two AS grades are accepted in place of one A-Level (except for Mathematics)

Admissions Tutor: Dr B Potter

Support for students and their learning

University support for students and their learning falls into two categories. Learning support is provided by a wide array of services across the University, including: the University Library, the Careers, Placement and Experience Centre (CPEC), In-session English Support Programme, the Study Advice and Mathematics Support Centre teams, IT Services and the Student Access to Independent Learning (S@il) computer-based teaching and learning facilities. There are language laboratory facilities both for those students studying on a

language degree and for those taking modules offered by the Institution-wide Language Programme. Student guidance and welfare support is provided by Personal Tutors, School Senior Tutors, the Students' Union, the Medical Practice and advisers in the Student Services Centre. The Student Services Centre is housed in the Carrington Building and offers advice on accommodation, careers, disability, finance, and wellbeing, academic issues (eg problems with module selection) and exam related queries. Students can get key information and guidance from the team of Helpdesk Advisers, or make an appointment with a specialist adviser; Student Services also offer drop-in sessions and runs workshops and seminars on a range of topics. For more information see www.reading.ac.uk/student

Within the providing School additional support is given through practical laboratory classes. The development of problem-solving skills is assisted by appropriate assignment and project work. There is a Course Adviser to offer advice on the choice of modules within the programme. Course handbooks are provided for each Part of the course: these give more details about the modules which make up the degree. In addition, the School of Systems Engineering produces a Handbook for Students, which provides general information about the staff and facilities within the School.

Career prospects

In recent years most students who have followed this programme have gone into jobs involving electronic systems design. These include manufacturers of mobile phones, computers, computer networking products, and integrated circuits. Others have joined research groups in university and industry, the public service, and the teaching professions. Graduates from this programme are exempt from the academic requirements for Chartered Engineer under UK-SPEC and membership of the Institution of Engineering Technology. After a period of professional development (order of 4 years), a graduate can expect to achieve Chartered Engineer status.

Opportunities for study abroad or for placements

N/A

Programme Outcomes

The programme provides opportunities for students to develop and demonstrate knowledge and understanding, skills, qualities and other attributes in the following areas:

Knowledge and Understanding

A. Knowledge and understanding of:

1. Appropriate mathematical techniques to help model and analyse systems, and use mathematics as a tool for communicating results and concepts.
2. Science underlying Electronic Engineering systems.
3. Information technology.
4. Design of electronic engineering systems, including the methods of applying engineering principles to create new products and systems, but including the constraints in applying inappropriate technology and the needs of commercial risk evaluation.
5. Management and business practices, including finance, law, marketing and quality control
6. Electronic Engineering practice.

Teaching/learning methods and strategies

The knowledge required for the basic topics is obtained via lectures, tutorials, laboratory practicals, assignments and project work.

Appropriate IT packages are taught.

Demonstrators in laboratory and project supervisors advise students, and feedback is provided on all continually assessed work.

As the course progresses, students are expected to show greater initiative and undertake independent research.

Assessment

Most knowledge is tested through a combination of practicals, assignments and formal examinations: students write reports on most assignments after Part 1, and oral presentations are also assessed.

Skills and other attributes

B. Intellectual skills - able to:

1. Select and apply appropriate scientific principles, mathematical and computer based methods for analysing general electronic engineering systems.
2. Analyse and solve electronic engineering

Teaching/learning methods and strategies

Appropriate mathematical, scientific and IT skills and tools are taught in lectures, and problems to be solved are given as projects or assignments. Project planning is part of the Part 3 project, and written and

problems.

3. Be innovative and creative.
4. Organise tasks into a structured form.
5. Understand the evolving state of knowledge in a rapidly developing area.
6. Transfer appropriate knowledge and methods from one topic in electronic engineering to another.
7. Plan, conduct and write a report on a project or assignment.
8. Prepare an oral presentation.

C. Practical skills - able to:

1. Use appropriate mathematical methods or IT tools.
2. Program a computer to solve problems.
3. Use relevant laboratory equipment and analyse the results critically.
4. Design, build and test a system.
5. Research into electronic engineering problems.
6. Manage projects effectively.
7. Present work both in written and oral form, using appropriate technology.

D. Transferable skills - able to:

1. Use IT tools.
2. Acquire, manipulate and process data.
3. Use creativity and innovation.
4. Solve problems.
5. Communicate scientific ideas.
6. Give oral presentations.
7. Work as part of a team.
8. Use information resources.
9. Manage time.

oral presentations are required for various assignments and projects.

Creativity and innovation is embedded into the course, in laboratory classes and project work.

Assessment

1-6 are assessed partly by examination, though sometimes also by project or assignment work. 7 and 8 are assessed as part of project work.

Teaching/learning methods and strategies

Mathematics and IT tools are introduced in lectures and their use is assessed by examinations and assignments.

Programming assignments are set, and students may write programs to solve other projects.

Laboratory practicals and projects are used to teach about 3, and projects are used for 4, 5, 6 and 7.

Assessment

1 and 5 are tested in coursework and in examinations. 2, 5 and 7 are tested by assignments and projects, 3 is assessed in practicals and sometimes in projects, 4, 5 and 6 are assessed through project work.

Teaching/learning methods and strategies

Some IT tools are taught in lectures, but most through laboratory sessions and assignments. Data skills are acquired in laboratory and projects. Creativity, innovation and problem solving are experienced through projects, as are team working, time management and presentations. Use of information resources, such as the library and IT methods, is experienced through projects and assignments.

Assessment

Some skills, like the use of IT tools and the ability to communicate orally and in written form are directly assessed, in assignments or projects, other skills are not directly assessed but their effective use will enhance the students overall performance.

Please note - This specification provides a concise summary of the main features of the programme and the learning outcomes that a typical student might reasonably be expected to achieve and demonstrate if he/she takes full advantage of the learning opportunities that are provided. More detailed information on the learning outcomes, content and teaching, learning and assessment methods of each module can be found in the module description and in the programme handbook. The University reserves the right to modify this specification in unforeseen circumstances, or where the process of academic development and feedback from students, quality assurance process or external sources, such as professional bodies, requires a change to be made. In such circumstances, a revised specification will be issued.
