

MSc in Renewable Energy: Technology and Sustainability **For students entering Part 1 in 2011/2**

Awarding Institution:	University of Reading
Teaching Institution:	University of Reading
Relevant QAA subject Benchmarking group(s):	
Faculty:	Science Faculty
Programme length:	1 years
Date of specification:	24/Aug/2011
Programme Director:	Dr Maria Vahdati
Programme Advisor:	
Board of Studies:	MSc in Construction Management
Accreditation:	

Summary of programme aims

The programme aims to impart:

- Understanding of, and the ability to engage in informed debate concerning, the role of energy in the modern world, the resulting environmental and societal impacts (including the evidence for and against climate change) and alternative means of energy provision that seek to minimise any negative impacts;
- Analytic, and limited practical skills, for the assessment, selection and deployment of renewable energy technologies in the field, with an emphasis on Wind, Hydro, Solar and Biomass;
- Analytic skills appropriate for the outline assessment of conventional energy technologies, including those based on fossil and nuclear resources;
- Sufficient experience of conducting and reporting independent research as is necessary for more able candidates to proceed to doctoral studies;
- Confidence in interacting with the key players in the new, and traditional, energy supply technologies within the UK, Europe and elsewhere;
- Understanding of energy efficiency technologies with a particular emphasis on their use within the built environment.

The programme also aims to:

- Develop students' mathematical and analytic skills in such a way that they are able to make rational decisions about energy supply options based on quantitative arguments;
- Introduce students to the wider context in which 'real world' decisions must be made, by demonstrating, through example, that technical analysis alone cannot be relied upon to produce positive outcomes;
- Develop students' mental agility and flexibility with multi-disciplinary problems, such that they are able to recognise the key drivers influencing any energy-related decision, and bring to bear appropriate analytic skills such that optimal outcomes are achieved, drawing on personal development and research where necessary.

Transferable skills

Many transferable skills are covered, distributed over the portfolio of modules. These include: Report writing, Design of experiments (in the widest sense), Modelling using spreadsheet and other computer tools, Use of the traditional and new media for research, team working skills.

Programme content

<i>Code</i>	<i>Module title</i>	<i>Credits</i>	<i>Level</i>
CEMREC	Energy Carbon and the Environment	20	7
CEMRHP3	Sustainable Heat and Power	30	7
CEMRMR	Research Methods and Projects	10	7
CEMREB2	Energy in Buildings	20	7
CEMRUS	Sustainable Urban Systems	10	7
CEMRC2	Carbon Management 2	20	7
CEMRPM	Project Management for Engineering and Construction	10	7
CEMRP	MSc Research Project, Seminar and Dissertation	60	7

Part-time or modular arrangements

The MSc is offered over 12 months on a full-time basis and over 24 months on a part-time basis; the PGDip is offered over 8 months full-time; the PGCert is offered over 8 months part-time. Individual modules can be taken as a short course on an ad-hoc basis.

Progression requirements

Candidates will not be permitted to attempt more than 70 credits in any single term. Progress will be reviewed before the start of the Summer term, to ensure that candidates have a reasonable prospect of amassing sufficient taught credits to pass. Candidates with a deficit of more than 70 taught credits at the start of the Summer term will not be permitted to proceed. Candidates must complete at least 120 taught credits of the course in order to proceed to the research project. PGDip candidates who perform sufficiently well over the taught modules may be offered the opportunity to register for the MSc.

Assessment and classification

Modules will be delivered mainly in a block format, relying primarily on lectures, seminars, and assessment comprising course work and class test/examinations. Block modules will be supported by prior reading to be completed by students prior to attendance, and will be structured to include sufficient active learning to make the relatively concentrated delivery easily digestible. Module CEMRHP3 (30 credits) will include a limited amount of practical work. Several modules will make extensive use of computer simulation techniques.

The standard University masters classification system, as found on www.reading.ac.uk/Exams/pgaward08-09.pdf will be employed as follows:

Mark Interpretation

70 - 100% Distinction

60 - 69% Merit

50 - 59% Good standard (Pass)

Failing categories:

40 - 49% Work below threshold standard

0 - 39% Unsatisfactory Work

For Masters Degrees

To pass the MSc, students must gain a weighted average mark of 50 or more over 180 credits including a mark of 50 or more for module CEMRP and no mark below 40 in each of the modules: CEMREC, CEMRHP3, CEMRMR, CEMREB2, CEMRUS, CEMRC2, CEMRPM. In addition the total credit value of all modules marked below 40 must not exceed 30 credits and of all modules marked below 50 must not exceed 55 credits.

To qualify for Merit, students must gain an overall average of 60 or more over 180 credits and a mark of 50 or more for the project/dissertation module CEMRP, and must not have any mark below 40.

To qualify for Distinction, students must gain an overall average of 70 or more over 180 credits and a mark of 60 or more for the project/dissertation module CEMRP, and must not have any mark below 40.

For PG Diplomas

To pass the Postgraduate Diploma, students must gain an overall average of 50 or more over 120 credits (not including module CEMRP) and no mark below 40 in the modules: CEMREC, CEMRHP3, CEMRMR, CEMREB2, CEMRUS, CEMRC2, CEMRPM. In addition the total credit value of all modules marked below 40 must not exceed 30 credits and for all modules marked below 50 must not exceed 55 credits.

To qualify for Merit, students must gain an overall average of 60 or more over 120 credits, and must not have any mark below 40.

To qualify for Distinction, students must gain an overall average of 70 or more over 120 credits, and must not have any mark below 40.

For PG Certificate

To pass the Postgraduate Certificate, students must gain an overall average of 50 or more over 60 credits (not including module CEMRP) and have no mark below 40 in any of the selected modules.

Admission requirements

Entrants will normally be required to have achieved a degree in a numerate, technical subject at the equivalent of a UK 2.2 honours or better. Any substantial prior experience in the field will be taken into account to ameliorate any deficiencies in the academic qualifications of an exceptionally able applicant.

Admissions Tutor: Dr Maria Vahdati m.m.vahdati@reading.ac.uk

Support for students and their learning

University support for students and their learning falls into two categories. Learning support is provided by a wide array of services across the University, including: the University Library, the Student Employment, Experience and Careers Centre (SEEC), In-session English Support Programme, the Study Advice and Mathematics Support Centre teams, IT Services and the Student Access to Independent Learning (S@il) computer-based teaching and learning facilities. There are language laboratory facilities both for those students studying on a language degree and for those taking modules offered by the Institution-wide Language Programme. Student guidance and welfare support is provided by Personal Tutors, School Senior Tutors, the Students' Union, the Medical Practice and advisers in the Student Services Centre. The Student Services Centre is housed in the Carrington Building and offers advice on accommodation, careers, disability, finance, and wellbeing. Students can get key information and guidance from the team of Helpdesk Advisers, or make an appointment with a specialist adviser; Student Services also offer drop-in sessions and runs workshops and seminars on a range of topics. For more information see www.reading.ac.uk/student

Additional school level support will be provided through:

A personal tutor;

The programme director;

A detailed programme handbook;

Activities designed to break down barriers and encourage appropriate social interactions between students, and for that matter, staff.

Career prospects

There are excellent employment prospects. Energy is high on the political and research agenda, and the programme is designed to produce graduates able to participate in the entire range of activities that support that agenda, be they located in the industrial, consultancy, public or private sectors.

Opportunities for study abroad or for placements

There is no formal provision for study abroad within the programme. However candidates are encouraged to undertake research projects with external collaborators, who may be located outside the UK.

Programme Outcomes

Knowledge and Understanding

A. Knowledge and understanding of:

1. The role of energy in the modern world, including the resulting environmental and societal impacts
2. Technical and other means of minimising the negative environmental and societal impacts of energy use
3. 'Practical' skills in the deployment of low impact energy systems
4. Deeper understanding of aspects of the above

Teaching/learning methods and strategies

Modules CEMREC, CEMRUS, CEMRC2
Modules CEMRHP3 and 2, CEMREB2, CEMRUS, CEMRC2

Modules CEMRHP3, CEMREB2, CEMRPM

Assessment

Distributed across all cited modules:

- Individual Assignments
- Group assignments
- Examinations

Skills and other attributes

B. Intellectual skills - *able to*:

1. Identify the key theoretical issues underlying

Teaching/learning methods and strategies

- Case studies in lecture courses, and assessments

real, multidisciplinary problems (particularly in energy)

2. Present an argument using data derived from research or literature
3. Present an argument using quantitative reasoning, supported by other analytic reasoning where appropriate

C. Practical skills - *able to*:

1. Design and perform laboratory experiments
2. Use computers for research, analysis and presentation
3. Manage projects in the field

D. Transferable skills - *able to*:

1. Write formal reports
2. Give seminars
3. Design and use spreadsheets for modelling
4. Use commercial software
5. Obtain information from conventional and new media
6. Undertake research
7. Work in groups

based on real problems

- Module CEMRMR, and Research Project
- Quantitative reasoning in context is intrinsic to all core modules

Assessment

- Assignments & Examinations in modules CEMREC, CEMRHP3, CEMREB2, CEMRUS, CEMRPM, CEMRMR
- Assignments in modules CEMREC, CEMRC2, CEMRMR
- Write ups and seminars for mini-project and research project

Teaching/learning methods and strategies

1. Laboratory experiments in CEMRHP3
2. Integral to all core modules, training provided as part of CEMRMR
3. Module CEMRPM and field trips in other modules

Assessment

- Laboratory write-ups
- Essential for completion of many assignments
- Assignment in CEMRPM, also completion of field work

Teaching/learning methods and strategies

1. Module CEMRMR
2. Module CEMRMR
3. Instruction distributed across all core modules
4. Commercial software used in CEMRHP, CEMREB2
5. Module CEMRMR, and other core modules
6. Module CEMRMR, and in preparation of assignments for other modules
7. Group work intrinsic to CEMREB2 and CEMRHP3, particularly practicals

Assessment

- Final assignment for CEMRMR, and other coursework reports. Research project
- Seminar in module CEMRMR, and in other modules
- Spreadsheets developed during CEMRHP and CEMRC2
- Assignments in some core modules are based around commercial software
- Integral part of almost all coursework
- CEMRMR and Research Project outputs
- Practical write-ups in CEMRHP

Please note - This specification provides a concise summary of the main features of the programme and the learning outcomes that a typical student might reasonably be expected to achieve and demonstrate if he/she takes full advantage of the learning opportunities that are provided. More detailed information on the learning outcomes, content and teaching, learning and assessment methods of each module can be

found in the module description and in the programme handbook. The University reserves the right to modify this specification in unforeseen circumstances, or where the process of academic development and feedback from students, quality assurance process or external sources, such as professional bodies, requires a change to be made. In such circumstances, a revised specification will be issued.
