

MSc in Plant Diversity
For students entering in 2012/3

Awarding Institution:	University of Reading
Teaching Institution:	University of Reading
Relevant QAA subject Benchmarking group(s):	
Faculty:	Life Sciences Faculty
Programme length:	1 years
Date of specification:	19/Feb/2013
Programme Director:	Dr Alastair Culham
Programme Advisor:	
Board of Studies:	Plant Diversity
Accreditation:	

Summary of programme aims

The MSc in Plant Diversity is designed to address the broad area of Plant Systematics and Biodiversity, which has become both socially and scientifically important in the modern world at national and international scales.

The course aims to provide professional-level training in the characterisation, assessment and sustainable management of plant diversity, both at the level of the world's flora and of its vegetation. The specific aims are:

- a) To provide a broadly-based introduction to classical and contemporary aspects of plant taxonomy, conservation and resource management.
- b) To provide a theoretical understanding of vegetation ecology and the practical skills necessary to identify higher and lower plants and to design, carry out and interpret vegetation surveys in an applied context.

Transferable skills

By the end of the course, students will have developed the following transferable skills:

- (i) word processing, use of the Internet and Worldwide Web, statistics packages and other computer skills;
- (ii) design of research projects;
- (iii) development of research, herbarium and field collecting techniques, molecular and microscopical analysis;
- (iv) data analysis using univariate and multivariate statistics and other techniques;
- (v) communication skills, written and verbal, poster presentation and use of PowerPoint;
- (vi) ability to use database/library resources.

Programme content

The modules that make up the taught component of the course are listed below. Note that *BIMPB12 Diversity and Identification of Plants* is taught in part at the Royal Botanic Gardens Kew by staff of RBG, part at the National History Museum, South Kensington, by staff of the NHM and part at the Royal Horticultural Society's Garden, Wisley, by RHS staff.

Compulsory Modules

Module	Title	Credits	Level	Term
BIMPB12	Diversity and Identification of Plants	20	M	A, Sp
BIMPC1	Critical Discussion	10	M	A
BIMPI12	Research and Professional Skills	20	M	A, S
BIMPJ12	Global Biodiversity and Conservation	20	M	A, Sp
BIMPK12	Vegetation Survey and Assessment	20	M	A, Sp
BIMPP60	Research Project	60	M	A, Sp, Su
BIMWG2	GIS for Wildlife Managers	10	M	Sp

Take ONE of:

Module	Title	Credits	Level	Term
EITHER/OR				
BIMPE23	Molecular Systematics	20	M	Sp, Su
BIMPL23	UK Field Courses	20	M	Sp, Su

Students must choose ONE from BIMPE23 OR BIMPL23 based on whether their interests and strength is within phylogenetics or field biology.

Part-time or modular arrangements

Students taking their degree part-time over two years are normally expected to take 60 taught credits and conduct half their project work in each academic year. The dissertation is to be submitted by the deadline for the second year of study.

Progression requirements

Summary of Teaching and Assessment

The teaching is organised in modules (totalling 180 credits) that involve a combination of lectures, tutorials, workshops, seminars, field courses and practical sessions. Modules taken during the autumn and spring term will be assessed by a mixture of course work and formal examinations. The remaining credits will be assessed by written reports of the work undertaken.

The University's taught postgraduate marks classification is as follows:

Mark Interpretation

70 - 100% Distinction

60 - 69% Merit

50 - 59% Good standard (Pass)

Failing categories:

40 - 49% Work below threshold standard

0 - 39% Unsatisfactory work

For Masters Degrees

To pass the MSc students must gain an average mark of 50 or more overall in 180 credits, including a mark of 50 or more for the dissertation. In addition the total credit value of all modules marked below 40 must not exceed 30 credits and for all modules marked below 50 must not exceed 55 credits.

Students who gain an average mark of 70 or more overall including a mark of 60 or more for the dissertation and have no mark below 40 will be eligible for a Distinction. Those gaining an average mark of 60 or more overall including a mark of 50 or more for the dissertation and have no mark below 40 will be awarded eligible for a Merit.

For PG Diplomas

To pass the Postgraduate Diploma students must gain an average mark of 50 or more over 120 credits. In addition the total credit value of all modules marked below 40 must not exceed 30 credits and for all modules marked below 50 must not exceed 55 credits.

Students who gain an average mark of 70 or more overall including a mark of 60 or more for the dissertation and have no mark below 40 will be eligible for a Distinction. Those gaining an average of 60 or more overall including a mark of 50 or more for the dissertation and have no mark below 40 will be awarded eligible for a Merit.

Admission requirements

Entrants to this programme will normally be required to have obtained an honours degree in Botany, Biological Science, Plant Science, Environmental Science, Horticulture or a related discipline. Applicants will normally be expected to have gained a Class 2(i) degree, but those with Class 2(ii) degrees may apply, and each case will be considered on its merits. Applicants with alternative qualifications may be expected to attend an ad-hoc year of courses to establish their academic credentials and to fill knowledge gaps.

Admissions Tutor: Dr. J.A. Hawkins

Support for students and their learning

University support for students and their learning falls into two categories. Learning support is provided by a wide array of services across the University, including: the University Library, the Student Employment, Experience and Careers Centre (SEEC), In-sessional English Support Programme, the Study Advice and Mathematics Support Centre teams, IT Services and the Student Access to Independent Learning (S@il) computer-based teaching and learning facilities. There are language laboratory facilities both for those students studying on a language degree and for those taking modules offered by the Institution-wide Language

Programme. Student guidance and welfare support is provided by Personal Tutors, School Senior Tutors, the Students' Union, the Medical Practice and advisers in the Student Services Centre. The Student Services Centre is housed in the Carrington Building and offers advice on accommodation, careers, disability, finance, and wellbeing. Students can get key information and guidance from the team of Helpdesk Advisers, or make an appointment with a specialist adviser; Student Services also offer drop-in sessions and runs workshops and seminars on a range of topics. For more information see www.reading.ac.uk/student

Each student will be assigned to a personal tutor and in term 3 will also have a research project supervisor. A closed Facebook group is established each year to give students an informal forum for information exchange and discussion during the course.

Career prospects

There is an expanding market for graduates with the ability to document, classify, assess, manage and conserve global biodiversity. Many of the graduates of the Taxonomy and Biodiversity stream who do not go on to higher degrees are likely to find employment in our internationally-recognised associated institutions, the Royal Botanic Gardens, Kew, the National History Museum, South Kensington, the RHS Wisley or in similar institutions elsewhere in the country or abroad.

Vegetation Survey and Assessment graduates have usually gone into consultancies undertaking environmental impact assessment, on working with conservation organizations. There is an expanding market for graduates with the ability to document, classify, assess, manage and conserve global biodiversity. Opportunities for study abroad or for placements

This course introduces most of the students to plants from around the world through glasshouse based teaching at Reading and Kew. In addition, the project work gives plenty of opportunities to work overseas. Other placements can often be arranged as required with other institutions, universities or field stations with which the School of Biological Sciences has contact.

Programme Outcomes

Knowledge and Understanding

A. Knowledge and understanding of:

1. The range of plant diversity.
2. The factors affecting vegetation types and species distributions
3. The assessment of biodiversity.
4. The classification of plants.
5. The characters which can be used to classify plants.
6. The need for and methods available for conservation.
7. The factors which control plant distribution.
8. The assessment of rarity.
9. Methods of vegetation survey

Teaching/learning methods and strategies

All these are covered in taught modules, by lectures and practical work.
5 is taught through hands-on field and herbarium experience
9 is taught hands-on in the field

Assessment

The taught modules are assessed by some combination of examination, in-course tests, oral presentations and written assignments. 1 is also assessed by an identification quiz. 9 is assessed in fieldwork reports.
2,3,4,5,7,8 and 9 are often components of the research project.

Skills and other attributes

B. Intellectual skills - able to:

1. Understand the principles, underlying plant

Teaching/learning methods and strategies

All these areas are covered by taught modules. The

classification.

2. Understand the principles underlying the classification of plant communities.
3. Understand the concepts underlying statistical data analysis.
4. Interpret vegetation surveys.
5. Select appropriate characters for plant classification.
6. Understand the interactions between climate, soils and vegetation.
7. Understand the principles of genetic change and evolution.

C. Practical skills - *able to*:

1. Use keys to identify plants.
2. Conduct field surveys.
3. Use statistical and classification computer packages.
4. Manage plant collections.
5. Carry out laboratory work with microscopes, chemicals and a variety of metering instruments.
6. Dissect and describe a flower.

D. Transferable skills - *able to*:

1. Use of the Internet.
2. Use of statistical packages.
3. Preparation of a research proposal.
4. Prosecution of research by applications of laboratory or field techniques.
5. Written and verbal communication skills.
6. Use of databases and library search methods.
7. Time management.

lectures are often supported by practical work or by a combination of lectures and seminars. 4 is also taught on field courses.

Assessment

Examination questions will test understanding in 1 and 2.

3, 4 and 5 are tested by practical or fieldwork reports.

6 and 7 are tested by in-course assignments.

Teaching/learning methods and strategies

Fieldwork and laboratory work are components of most of the taught modules, and all these areas are addressed by hands-on experience. Most research projects will contain evidence of use of more than one of these skills.

Assessment

1 is assessed in identification tests

2 is assessed in fieldwork reports

3 & 5 are assessed in the research project

3, 4 and 5 are assessed in laboratory reports on practical work.

6 is assessed by an in-course plant description exercise.

Teaching/learning methods and strategies

1,2,6 and 7 are incorporated within taught modules.

3 in the module containing research report preparation.

4 is taught in laboratory and field based practicals.

5 is taught in feedback given on essays, oral presentations and the research report.

Assessment

1,2 and 6 come within modular assessment of one particular module.

4 is assessed in laboratory and fieldwork reports.

5 and 7 are tested in essays, oral presentations and the research report.

Please note - This specification provides a concise summary of the main features of the programme and the learning outcomes that a typical student might reasonably be expected to achieve and demonstrate if he/she takes full advantage of the learning opportunities that are provided. More detailed information on the learning outcomes, content and teaching, learning and assessment methods of each module can be found in the module description and in the programme handbook. The University reserves the right to modify this specification in unforeseen circumstances, or where the process of academic development and feedback from students, quality assurance process or external sources, such as professional bodies, requires a change to be made. In such circumstances, a revised specification will be issued.
