BSc Computer Science   **UCAS code: G400**
For students entering Part 1 in 2012/3

Awarding Institution:	University of Reading
Teaching Institution:	University of Reading
Relevant QAA subject Benchmarking group(s):	Computing
Faculty:	Science Faculty
Programme length:	3 years
Date of specification:	25/Jul/2014
Programme Director:	Dr Hong Wei
Programme Advisor:	Dr Lily Sun
Board of Studies:	UG Systems Engineering
Accreditation:	British Computer Society

Summary of programme aims

This programme aims to prepare students for a career in the software and computing industry, with a particular emphasis on technologically advanced software applications having a basis in science. Graduates will be well qualified to play a disciplined and creative part in a research, development or support environment.

The programme aims to develop the students' knowledge of the theory and practice of modern computer science, necessary for them to secure employment as professional software engineers and computer system engineers in a wide variety of industries; to encourage their critical and analytical skills; and to develop their skills in applying theoretical concepts to the practice of computer systems design.

Transferable skills

During the course of their studies at Reading, all students will be expected to enhance their academic and personal transferable skills. In following this programme, students will have had the opportunity to develop such skills, in particular relating to communication, interpersonal skills, learning skills, self-management, use of IT, technical writing, and problem-solving and will have been encouraged to further develop and enhance the full set of skills through a variety of opportunities available outside their curriculum.

As part of this programme students are expected to have gained experience and show competence in the following transferable skills: IT (word-processing, using standard and mathematical software, scientific programming), scientific writing, oral presentation, team-working, problem-solving, use of library resources, time-management, career planning and management, and business awareness.

Programme content

The profile follows states which modules must be taken (the compulsory part), together with one or more lists of modules from which the student must make a selection (the 'selected/optional' modules). Students must choose such additional modules as they wish, in consultation with their programme adviser, to make 120 credits in each Part. The number of credits for each module is shown after its title.

Part 1 (three terms)
Compulsory modules

Code	Module title	Credits	Level
SE1PR11	Programming	20	4
SE1SE11	Software Engineering	20	4
SE1CA11	Computer Applications	20	4
SE1FC11	Fundamentals of Computing	20	4

Optional modules
Select modules worth 40 credits from:

SE1EA11	Enterprise, Architecture and e-Business Systems	20	4
SE1CC11	Cybernetics and Circuits	20	4
MA115	Codes and Code Breaking	20	4
LA1XX1	Institution Wide Language Programme	20	4

Either:

SE1EM11	Engineering Mathematics	20	4

Or:

SE1MC12	Mathematics for Computer Scientists	20	4

Part 2 (three terms)

Compulsory modules

Code	Module title	Credits	Level
SE2SM11	Systems Design and Project Management	20	5
SE2CA11	Computer Architecture	10	5
SE2DB11	Databases	10	5
SE2FD11	Advanced Databases	10	5
SE2CO11	Compilers	10	5
SE2OS11	Operating Systems	10	5
SE2EA11	Essential Algorithms	10	5
SE2JA11	Java	20	5

Optional modules:

SE2NN11	Neural Networks	10	5
SE2RS11	Robotic Systems	10	5
SE2MI11	Machine Intelligence	10	5
SE2HA11	HCI and Applications	20	5

Part 3 (three terms)

Compulsory modules

Code	Module title	Credits	Level
SE3IP11	Individual Project	40	6
SE3SL11	Social, Legal and Ethical Aspects of Science and Engineering	10	6

Optional modules
Select modules worth 70 credits from:

SE3CN11	Computer Networking	20	6
SE3AC12	Advanced Computing	10	6
SE3CS12	Concurrent Systems	10	6
SE3VR11	Virtual Reality	10	6
SE3IA11	Image Analysis	10	6
SE3EC11	Evolutionary Computation	10	6
SE3SQ11	Software Quality and Testing	10	6
SE3DM11	Data Mining	10	6
SE3IS14	Information Security	10	6
SE3RD11	Requirements, Domains and Soft Systems	10	6
MM374	Informatics for e-Enterprise	20	6

Progression requirements
In order to complete the programme with a degree, students must satisfy general progression rules from Part 1 to Part 2, Part 2 to Part 3, and then successfully achieve the threshold for final classification.

n/a

To gain a threshold performance at Part 1 and qualify for the CertHE a student shall normally be required to achieve an overall average of 40% over 120 credits taken in Part 1, where all the credits are at level 4 or above, and a mark of at least 30% in individual modules amounting to not less than 100 credits. In order to progress from Part 1 to Part 2, a student shall normally be required to achieve a threshold performance at Part 1, and to have no module mark below 30% in any of the compulsory Part 1 modules.

To gain a threshold performance at Part 2, a student shall normally be required to achieve:
(i) a weighted average of 40% over 120 credits taken at Part 2;
(ii) marks of at least 40% in individual modules amounting to not less than 80 credits; and
(iii) marks of at least 30% in individual modules amounting to not less than 120 credits.
In order to progress from Part 2 to Part 3 and qualify for the DipHE student must achieve the threshold performance.

n/a

To be eligible for Honours, students must achieve at least 40% in modules amounting to 80 credits in the final Part, including the Individual Project (SE3IP11).

Assessment and classification
The University's honours classification scheme is:

Mark	interpretation
70% - 100%	First class
60% - 69%	Upper Second class
50% - 59%	Lower Second class
40% - 49%	Third class
35% - 39%	Below Honours Standard
0% - 34%	Fail

For the University-wide framework for classification, which includes details of the classification method, please see: www.reading.ac.uk/web/FILES/exams/UGclassification-post-2007.pdf.

The weighting of the Parts/Years in the calculation of the degree classification is

Three-year programmes
Part 2 one-third
Part 3 two-thirds

Teaching is organised in modules that typically involve both lectures and practical work. Most modules are assessed by a mixture of coursework and formal examination. However, some modules are assessed only as coursework, while others are assessed solely by examination. Details are given in the relevant module descriptions.

Admission requirements
Entrants to this programme are normally required to have obtained:
Grade B in Mathematics and Grade C in English in GCSE; and achieved
A level: 300 points from 3 A Levels, or 340 points from 3 A Levels and 1 AS Level (total points exclude General Studies)
International Baccalaureate: 33 points; or
Irish Highers: AABBB
Equivalent qualifications are acceptable.

Admissions Tutor: Dr Oswaldo Cadenas

Support for students and their learning

University support for students and their learning falls into two categories. Learning support is provided by a wide array of services across the University, including: the University Library, the Careers, Placement and Experience Centre (CPEC), In-sessional English Support Programme, the Study Advice and Mathematics Support Centre teams, IT Services and the Student Access to Independent Learning (S@il) computer-based teaching and learning facilities. There are language laboratory facilities both for those students studying on a language degree and for those taking modules offered by the Institution-wide Language Programme. Student guidance and welfare support is provided by Personal Tutors, School Senior Tutors, the Students' Union, the Medical Practice and advisers in the Student Services Centre. The Student Services Centre is housed in the Carrington Building and offers advice on accommodation, careers, disability, finance, and wellbeing, academic issues (eg problems with module selection) and exam related queries. Students can get key information and guidance from the team of Helpdesk Advisers, or make an appointment with a specialist adviser; Student Services also offer drop-in sessions and runs workshops and seminars on a range of topics. For more information see www.reading.ac.uk/student

Within the School of Systems Engineering additional support is given though practical laboratory classes. The development of problem-solving skills is assisted by appropriate assignment and project work. There is a Course Adviser to offer advice on the choice of modules within the programme. Course handbooks are provided for each Part of the course: these give more details about the modules which make up the degree. In addition, the School of Systems Engineering produces a Handbook for Students, which provides general information about the staff and facilities within the school.

Career prospects

Most students who have followed this programme have gone into careers in the software industry. These range from small start-up companies to multi-nationals and several graduates have started their own businesses. Others have joined research groups in university and industry, the public service, and the teaching professions.

Opportunities for study abroad or for placements

Students who wish to undertake a year-long industrial placement may be eligible to transfer to the BSc Computer Science with Industrial Year. The placement year normally takes place between Parts 2 and 3 of this degree programme.

Programme Outcomes

The programme provides opportunities for students to develop and demonstrate knowledge and understanding, skills, qualities and other attributes in the following areas:

Knowledge and Understanding

A. Knowledge and understanding of:

1. Software engineering and theoretical issues in Computer Science.
2. A range of programming languages and environments.
3. Information technology.
4. Appropriate mathematical techniques, including the use of mathematics as a tool for communicating results, concepts and ideas.
5. Business context.
6. Engineering practice.

Teaching/learning methods and strategies

The knowledge required for the basic topics is obtained via lectures, exercises, practicals, assignments and project work.
Appropriate IT and other software packages are taught.
Practical demonstrators and project supervisors advise students, and feedback is provided on all continually assessed work.
As the course progresses students are expected to show greater initiative.

Assessment
Most knowledge is tested through a combination of practicals, assignments and formal examinations. Students write reports on many assignments, and also make oral presentations of their work.

Skills and other attributes

B. Intellectual skills - *able to:*

Teaching/learning methods and strategies

1. Select and apply appropriate computer based methods, mathematical and scientific principles for analysing general systems.
2. Analyse and solve problems.
3. Organise tasks into a structured form.
4. Understand the evolving state of knowledge in a rapidly developing area.
5. Transfer appropriate knowledge and methods from one topic within the subject to another.
6. Plan, conduct and write a report on a project or assignment.
7. Prepare an oral presentation and produce technical reports.

Appropriate software, mathematical, scientific and IT skills and tools are taught in lectures, and problems to be solved are given as projects or assignments. Project planning is part of the Part 3 project, and written and oral presentations are required for various assignments and projects.

Assessment
Skills 1-5 are assessed partly by examination, though sometimes also by project or assignment work. Skills 6 and 7 are assessed as part of project work.

C. Practical skills - *able to:*

1. Use appropriate software tools.
2. Program a computer to solve problems.
3. Use relevant software and analyse the results critically.
4. Design, build and test a system.
5. Research into computer science problems.
6. Utilise project management methods.
7. Present work both in written and oral form.

Teaching/learning methods and strategies

Software tools are introduced in lectures and their use is assessed by examinations and assignments. Programming assignments are set, and students may write programs to solve other projects.
Practicals and projects are used to teach about skill 3, and projects are used for skills 4, 5, 6 and 7.

Assessment
Skills 1 and 5 are tested in coursework and in examinations. Skills 2, 5 and 7 are tested by assignments and projects, 3 is assessed in practicals and sometimes in projects, Skills 4, 5 and 6 are assessed through project work.

D. Transferable skills - *able to:*

1. Use software tools.
2. Acquire, manipulate and process data.
3. Use creativity and innovation.
4. Solve problems.
5. Communicate scientific ideas.
6. Give oral presentations.
7. Work as part of a team.
8. Use information resources.
9. Manage time.

Teaching/learning methods and strategies

Software tools are taught partly in lectures, mainly through practical sessions and assignments.
Data skills are acquired in laboratory and projects.
Creativity and innovation and problems solving are experienced through projects, as are team working, time management and presentations. Use of information resources, such as the library and IT methods is experienced through projects and assignments.

Assessment
Some skills, like the use of software tools and ability to communicate orally and in written form are directly assessed, in assignments or projects, other skills are not directly assessed but their effective use will enhance the students overall performance.

Please note - This specification provides a concise summary of the main features of the programme and the learning outcomes that a typical student might reasonably be expected to achieve and demonstrate if he/she takes full advantage of the learning opportunities that are provided. More detailed information on the learning outcomes, content and teaching, learning and assessment methods of each module can be found in the module description and in the programme handbook. The University reserves the right to modify this specification in unforeseen circumstances, or where the process of academic development and feedback from students, quality assurance process or external sources, such as professional bodies, requires a change to be made. In such circumstances, a revised specification will be issued.
